BE THE FIRST ON THE FINISH LINE WITH SEABORG 350

Seaborg 350 is a racing steering wheel designed for virtual rally enthusiasts who value the perfect replication of vehicle handling in video games. Thanks to Seaborg 350's functionalities and high-quality controller, even the most demanding tracks won't be a problem for you and will provide you with unforgettable driving experiences.

HARDWARE VERSATILITY

Nowadays, entertainment options for virtual drivers are very diverse. To meet the expectations of video game fans who don't want to have to choose between playing on a console OR a computer, we have constructed one advanced steering wheel. You can connect it to many devices - Seaborg 350 is compatible with computers running Windows XP, Vista, 7, 8, 10, and 11. Console players, on the other hand, can play with it on PS3, PS4, Xbox One, Xbox 360 (in this case, you also need the original wired controller), and Nintendo Switch. You also don't have to worry about X-Input and D-Input support - the steering wheel works in both standards.

GENEROUSLY EQUIPPED

In addition to the steering wheel, the package also includes modern and realistic spring-loaded brake pedal and throttle pedals, as well as a sturdy gear shift knob and paddles. All of this is designed to make you feel in full control of your virtual vehicle. Start driving in the game and forget about the real world.

STURDY CONSTRUCTION AND SECURE GRIP

The 10-inch steering wheel is made entirely of very durable components that will allow you to travel extreme tracks for many years. Seaborg 350's solid construction is not everything, though. To ensure a strong, secure, and comfortable grip, high-quality rubber anti-slip material was used in the appropriate places on the steering wheel.

VIBRATIONS

Thanks to two built-in motors, Seaborg 350 guarantees strong vibrations that perfectly replicate the situation your car is in. With the shaking steering wheel, it simulates the behaviour of the vehicle and provides the sensation of sitting inside a real car.

FULL CONTROL

Seaborg 350 steering wheel is equipped with 15 buttons. Among them, you'll find an 8-directional DPAD. Many of them will allow you to configure them according to your preferences and likings. You are the driver, it's your cockpit, your steering wheel, and your virtual road ahead of you.

STABLE DRIVING

During important races, where your reputation among drivers depends on your victory, you cannot worry about the stability of your steering wheel. Focus solely on precisely overcoming turns. Seaborg 350 comes with a solid, easy-to-install mounting bracket and 6 strong stabilizing suction cups, so that even with vigorous 180-degree movements, the entire structure remains unshakeable.
