From the back of the warehouse to the retail floor, productivity has never been more important. Which is why we put our top engineers to task designing the most efficient, feature-loaded mobile computer possible. With a breakthrough ergonomic design and an extensive list of productivity-enhancing innovations, the TC8000 Touch Mobile Computer adds an extra hour of productivity per worker to the workday. Something your customers are going to be really happy with. Thanks, science.

REDUCES WRIST MOTION

The new scan angle eliminates the constant tilting that traditional designs require to view the screen, increasing productivity by 14%* through a 55% reduction in wrist motion and a 15% reduction in muscle effort.

ENTERPRISE-CLASS ANDROID

Mobility Extensions (Mx) transforms Android into an enterprise-class OS, providing enterprise-class security, device management and data capture capabilities.

WAREHOUSE-READY

The super-rugged design is built for the challenging warehouse environment. With our most extreme impact ratings, the TC8000 operates reliably, even after 2,000 consecutive hits when tumbling and multiple 8 ft./2.4 m drops to concrete.
