Sound without compromise

GENESIS Arsen 402BT are speakers created for users who want clear, full sound without sacrificing convenience and aesthetics. They combine a compact form factor with extensive connectivity, offering sound that will work whether you're playing intense games, watching movies or listening to music on a daily basis. It's a versatile audio solution that's easy to fit into your own style and space.

The sound you feel

The Arsen 402BT are designed for those who want more than just background sound. The wide frequency response of 60 to 20,000 Hz allows you to hear both subtle details and energetic bass. The result? The sound is full, dynamic and consistent whether you're gaming, listening to music or watching a movie. The sound gains the right amount of clarity, resulting in greater excitement and a better experience with every listening session.

Compact size, surprising power

The small but thoughtful design of the Arsen 402BT speakers makes it easy for them to find a place even on a smaller desk. This is an ideal solution for those who appreciate order and ergonomics, but do not want to sacrifice sound quality. The compact form factor here goes hand in hand not only with solid sound, but also 60 watts of power, so you get more workspace without compromise. With the Arsen 402BT, you're assured that your favorite games, movies and music will be immersive like never before.

Space-filling bass

In creating the Arsen 402BT, we relied on a bass-reflex port located at the front of the speakers, which improves bass control and makes the bass clear, resilient and free of unpleasant "rumble." This gives you the freedom to place the speakers close to the wall or other desk components without worrying about losing readability. It's a real convenience for everyday use and the assurance that the sound will remain clear in any configuration.

One set - many connectivity options

The speakers offer full flexibility with support for Bluetooth, RCA and optical connector standards. Whether you're using a computer, console, TV, smartphone or other audio source, connection is quick and intuitive. Here, wireless freedom combines with the versatility of classic connectors, giving you full control over how and from where you play sound.

Design to match your setup

GENESIS Arsen 402BT are available in classic black and stylish brown, so you can easily match them to the character of your workstation. The minimalist form and subdued color scheme make the speakers blend well with both a gaming setup and a more elegant living room or office space. This is a piece of equipment that does not impose itself in appearance, but consistently emphasizes the style of the place where you work and play.
