GSA 18V-28 Professional: Further information

Product Highlights

Thanks to the new BITURBO Brushless technology, the GSA 18V-28 offers maximum cordless cutting performance – equivalent to that of a 1,100 W corded reciprocating saw. The toolless snap-in function ensures simple, one-handed insertion and ejection of the saw blade. The GSA 18V-28 has a great power-to-weight ratio which makes it easier and less exhausting to work with in any position.

Equipment & Application

The GSA 18V-28 is ideal for demolition work involving a range of materials such as metal, wood, plastic, and insulation materials. It is compatible with the Bosch Professional 18V System.

Additional Information

The GSA 18V-28 is perfectly designed for close-to-wall cuts in an upside-down cutting position. Its ergonomic design shows a curved upper part of the handle which conveniently supports multi-grip positions. Speed can be adjusted easily and is continuously variable via a trigger. The reciprocating saw comes with an attachable rafter hook for balanced tool hanging.
