workshops or production areas. Thanks to the moulded plug connection, the cable is particularly robust and resistant to frequent plugging and unplugging – an important feature for daily use under demanding conditions. The compact design is specially designed for applications where space is limited or devices are installed close together. The technical design ensures that all European safety standards are met. As a supplementary item in the stock of system houses or technical wholesalers, the Euro extension cable is ideal for supplying a wide variety of devices, such as external hard drives, AV components, chargers or other electronic peripherals without a protective contact. Rely on tested quality for professional applications – with the InLine® Euro extension cable, you are on the safe side.

Plug type: Euro plug (CEE 7/16) to Euro socket
Number of poles:2-pole
Maximum load:2.5 A / 250 V
Plug type: Moulded design
Area of application: For devices in protection class II
