integrated signal amplification, your data connections remain stable and interference-free even with cable lengths of up to 25 meters.

This cable is ideal for connecting external hard drives, keyboards, mice or other USB-A peripherals in offices, public authorities or industrial facilities. Thanks to the **UL certification**, the product can also be used in the US market without any problems. The high-quality workmanship ensures a long service life even with frequent use.

The optional power supply via an additional USB-C port on the receiver side allows the operation of devices with higher power requirements. Installation is plug & play, without any additional drivers or software.

USB version: USB 2.0, backwards compatible with USB 1.1
Transfer speed: Up to 480 Mbit/s
Power supply: Via USB, optionally via USB-C on the receiver
Signal amplification: Integrated electronics
Compatibility: USB-A devices such as keyboards, mice, external drives
Certification: UL (suitable for USA)
Available lengths: 5 m to 25 m
