Connect a USB-C video source to an HDMI display, with support for HDR video

Connect a 4K 60Hz HDMI display to a DP Alt Mode-enabled USB Type-C source up to 30 feet (9.15 meters) away with this USB-C to HDMI Active Optical Cable.

Designed for Long Range

The USB-C to HDMI Active Optical Cable is designed for long-distance connections to overcome the limitations of standard copper cables. Its fiber optic inner core reduces electromagnetic interference (EMI), ensuring optimal signal quality with minimal signal degradation. EMI shielding reduces noise and improves signal clarity and stability.

Integrated Adapter Cable with HDR

This cable integrates a video adapter and cable, minimizing points of failure and signal loss. The HDMI Connector has a built-in 1.4ft (43.5cm) USB Type-A power cable, which is required to connect to an available USB port or USB wall charger (not included). HDR support includes 8/10bit RGB and YCbCr 4:4:4 for accurate color reproduction.

No Drivers or Software

Universal Adapter Cable does not require additional drivers or software installation. Compatible with all hardware platforms and operating systems including Windows, macOS, ChromeOS, and Linux. This USB Type-C to HDMI Adapter Cable works with laptops and devices that support USB-C DP Alt Mode, USB4, Thunderbolt 3, and Thunderbolt 4.

Durable Optical Cable

The OM3 multi-mode HDMI fiber optic cable features a durable PVC jacket, strain relief, and active booster for reliable transmission over long distances. This cable is lightweight, making it easy to route through walls or cable runs, store when not in use, and transport when needed.
