

Ricoh fi-7240 Flatbed & ADF scanner 600 x 600 DPI A4 Black, White

Model: PA03670-B601

Manufacturer: FUJITSU

EAN: 4939761308222

Product Code: 1054747

R18,620

- Efficient. Scan diverse paper documents supported by class leading technology

- Compact. Desktop and countertop placement allow for immediate document capture and transaction
- Automatic. From analogue to digital can be as simple as pressing the user panel buttons
- Intuitive. PaperStream Capture and PaperStream IP for high performance scanning of multiple documents at the same time and image clean up

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

Outstanding performance starts with reliable, compact hardware technology automatically supported by intuitive routines

The sleek and compact fi-7140 and fi-7240 desktop scanners from Fujitsu allow for merging paper document content with digitally born data.

- Enjoy the introduction of optimum quality from automated document capture
- Increase breadth of document management related activities such as invoice and forms processing, archiving and workflow
- Flexibly fit this document capture solution to existing and emerging tasks such as current mail delivery methods or addressing regulatory concerns

Designed to fit – document capture starts with these reliable scanning solutions

The fi-7140 and fi-7240 are designed to introduce seamless document capture routines to organisations and expand them into workgroups and departments. Easy set up, intuitive use and hassle-free maintenance with replaceable consumables and unhindered cleaning routines characterise these robust scanners. They inherit the latest fi Series hardware technology and PaperStream software.

Set to fit – trigger organisational routines

Define information handling routines and mimic paper based processes with PaperStream Capture. Then associate these routines with the intuitive user panel on the scanner’s front and trigger them instantly whenever sets of relevant documents need to be captured.

Management from a single location

Scanner Central Admin software enable Fujitsu scanners to be managed and maintained from a single location to minimise scanner downtime anywhere on the global system.

Enhanced mixed document batch operation and continuous uninterrupted scanning

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. Outstanding paper feeding is at the core of these scanners and they are able to scan mixed batches with thicknesses from 27 to 413g/m2. To help protect the original document, a paper protection function monitors document movement and automatically stops feeding when any irregularities are detected.

For mixed batch scanning where documents of different sizes, shapes, surface characteristics and paper thicknesses are grouped and processed together, the “skew reducer” roller mechanism supports feeding physically skewed documents within the batch, minimising the skew effect this document might else force on subsequent sheets. This ensures that each document is captured with the utmost precision and simplicity and ensures any documents are not crumpled or damaged.

Both scanner models additionally feature an ultrasonic sensor that accurately detects multiple paper layers where two or more sheets are fed through the scanner at once. The Intelligent Multifeed Function allows document scan parameters to be applied which enable the sensors to be set up to help identify and subsequently ignore purposely placed attachments such as sticky notes or items with a photo attached that would otherwise cause disruptions to the scanning process.

Integrated flatbed for even greater scanning potential

The fi-7240 model features an ultra fast built-in flatbed module that enables the scanning of diverse documents types such as those that may be bound, stapled or delicate.

Fujitsu developed best in class scanner driver and image capturing / processing software

PaperStream IP – high quality image enhancement

PaperStream IP is the scanner driver for the fi-7140 and fi-7240 scanners. In addition to being fully compliant with the industry standard TWAIN and ISIS interface, PaperStream IP incorporates as standard, highly sophisticated image processing that automatically applies features such as noise removal, background pattern removal and character augmentation to produce exceptionally clear, high quality images that are suitable for direct import into the users’ workflow.

PaperStream IP has an intuitive, easy to use interface that can be switched between Administrator or User mode to simplify the scanning process and reduce user error.

Additionally PaperStream IP also introduces a new Assisted Scanning mode, which allows the user to visually select the best quality image from a range of images of the page, rather than needing to manually fine tune the scanning parameters one by one.

PaperStream Capture – enhanced capture

PaperStream Capture is an easy to use capture tool which allows users to easily create scanning routines which encapsulate all of the settings and
configuration required to control the scanning process from scan to the release of the image to the users' or companies' defined workflow.

Once created, profiles can be run by a single click and the most frequently used profiles can even be linked to the fi-7140 and fi-7240 scanners
front panel scan button to streamline the whole capture process.
