for future use.

Focused Viewing, Protected Information

Whether you're in a café, on a plane, or at the office, these filters help keep your screen private. They use advanced “black-out” technology to block side views beyond a 60-degree angle - so only the person directly in front of the screen can see what’s on it. It’s an easy and effective way to protect sensitive data like emails, documents, and login details from prying eyes.

Smooth Interaction

While privacy is the priority, the filter’s smooth surface ensures a natural touchscreen experience - perfect for swiping, tapping, and typing without interruption. These filters are ideal for touchscreens, tablets and iPads.
