Fanttik M10 Ace cordless angle grinder

The Fanttik M10 Ace is a compact angle grinder that combines small dimensions with real power for home and workshop tasks. It is lightweight, comfortable to use, and ready to go right out of the box. It is suitable for cutting metal, wood, or tiles, and thanks to its well-thought-out design, it works quietly and stably.

Compact form, solid power

The M10 Ace weighs only 0.75 kg, which translates into comfort during longer work and greater precision in guiding the tool. The brushless motor reaches speeds of up to 10,000 rpm, allowing it to handle typical DIY tasks with ease. The cutting depth of up to 20 mm allows you to cut through various materials efficiently, without the need for larger and heavier equipment. The quiet operation of the motor is an additional advantage – you can work in your garage or apartment without excessive noise, while maintaining high performance.

3 operating modes and smart LED display

The sander offers three operating modes that can be easily changed using the EZshift switch. With a single movement, you can adjust the settings to the material being worked on, which translates into better control and a cleaner cut. The built-in LED display allows you to check the battery level and current mode at any time. The device informs you when the energy level is low and needs to be recharged, so you can avoid unexpected interruptions in your work.

Dual safety system

The Fanttik M10 Ace is equipped with a two-stage start-up system. To start working, you need to perform two movements: move the switch forward and press the button. This solution reduces the risk of accidental activation and gives you full control over the tool. When the button is released, the device stops automatically, without the need for manual unlocking. The disc guard with an aluminum grinding cover further increases safety during cutting.

Fast charging via USB-C

This is one of the first grinders in its class with USB-C charging. The built-in 18.5 Wh battery, when fully charged, allows you to cut a 3 mm thick PVC pipe up to 75 times. This means less downtime and greater work efficiency. USB-C charging simplifies everyday use—no need for special, bulky chargers. All you need is a standard cable, which you will appreciate especially when traveling or working in the field.

Four blades included - complete versatility

The set includes four professional blades: aluminum oxide, resin, alloy, and diamond. This allows you to cut metal, wood, tiles, and other materials right away without having to buy additional accessories. Combined with the EZshift switch, the tool becomes a universal aid for home renovations, minor repairs, and DIY projects. One device, many uses, and real time savings.
