

Flextail Zero Mattress R05 Regular L inflatable mattress (orange)

Model: Zero R05 L-O

Manufacturer: FLEXTAIL

EAN: 6975755967462

Product Code: 1079412

R2,402

Flextail Zero Mattress R05 Regular L (orange)

The Flextail Zero Mattress R05 Regular L is a modern inflatable mattress designed for demanding outdoor enthusiasts. It combines high thermal insulation (R-value 5.6), a comfortable thickness of up to 10 cm, a lightweight trekking design, and an advanced 7-layer insulation structure. Thanks to the durable 20D Ripstop Nylon material with a TPU coating, ergonomic U-shaped air chambers, and effective aluminum insulation, the mattress ensures a comfortable sleep even in difficult terrain conditions. The Regular model offers a full, rectangular sleeping surface, making it ideal for those who value maximum space and stability when sleeping in a tent, trekking, or camping throughout the year.

Insulation that protects against the cold - R-value 5.6

One of the most important features of the mattress is its high insulation coefficient of R-value 5.6. This means very effective protection against heat loss to the cold ground. In practice, the mattress ensures comfortable sleep at temperatures around -7°C, and its usable limit reaches even -18°C. This makes the R05 Regular model ideal not only for summer, but also for spring, fall, and winter trips.

More space to sleep - the comfortable Regular shape

The Regular version offers the full width of the mattress along its entire length, which translates into greater freedom during sleep. This solution will be particularly appreciated by people who often change position at night or simply like to have more space. When unfolded, the mattress measures approximately 183 × 65 × 7 cm, providing comfortable support for the entire body and stability even on uneven ground.

U-shaped air chambers - stability and even support

The mattress uses an innovative system of U-shaped air chambers that stabilize the body and distribute pressure evenly during sleep. This allows the mattress to better adapt to the user's body shape and reduces the feeling of sinking into one part of the surface. This design also improves stability on the side and increases sleeping comfort throughout the night.

Up to 10 cm thick - insulation from hard surfaces

The mattress reaches a maximum thickness of approximately 10 cm, which effectively separates the body from cold and uneven ground. In the central part, the construction is approximately 7 cm thick, maintaining a perfect balance between stability and elasticity. This design makes even sleeping on rocky or hard ground much more comfortable.

Advanced 7-layer insulation construction

The R05 model is designed based on a multi-layer thermal insulation structure that effectively retains heat in the mattress. The construction uses a durable 20D Ripstop Nylon layer, a tight TPU

coating, a special aluminum heat-reflective coating, and air-insulating layers. The whole creates a system that minimizes heat loss to the ground and provides pleasant warmth even on cold nights.

Durable 20D Ripstop Nylon material

The mattress is made of lightweight yet highly durable 20D Ripstop Nylon material, which has been designed for intensive outdoor use. The special Ripstop structure reduces the risk of tearing the material and prevents damage from spreading. An additional TPU coating increases the tightness of the structure and protects the mattress from moisture and abrasion.

Easy inflation and quick deflation

The mattress is equipped with a one-way TPU valve, which makes it much easier to use when camping. The valve design prevents air from flowing back during inflation, making the process of preparing the mattress for sleep quick and convenient. After a night's sleep, the air can be deflated just as easily, allowing you to pack up your gear efficiently and get back on the road.

Proven reliability - 4S quality testing

Every Flextail mattress undergoes a rigorous 4S Testing Standard quality control process. This includes a 48-hour pressure maintenance test, monitoring of air volume changes, and temperature control inside the mattress. These procedures ensure that the mattress remains stable and airtight even during prolonged use in demanding terrain conditions.

Compact when packed - ideal for trekking

Despite its high level of comfort, the mattress remains very compact. When folded, it measures approximately Ø13 × 27.5 cm, so it fits easily into a trekking backpack or travel bag. Its low weight and small transport size make the Flextail Zero Mattress R05 Regular L an excellent choice for those who travel light but do not want to compromise on comfortable sleep in the field.

- Inflatable mattress
- Storage bag

Manufacturer	Flextail
Model	Zero Mattress R05 Regular L
Type	Ultralight trekking/camping mattress
Shape	Regular (rectangular)
Color	Orange

Insulation coefficient (R-value) 5.6

Temperature	approx. -7°C
Limit temperature	approx. -18°C
Seasonality	4-season
Length	approx. 183 cm
Width	approx. 65 cm
Thickness	approx. 7 cm

Dimensions when packed approx. Ø13 × 27.5 cm

Chamber construction	U-shaped air chambers stabilizing the body
Outer material	20D Ripstop Nylon
Coating	TPU (100% Premium TPU)
Valve type	One-way TPU valve
Waterproof	Yes
Abrasion resistance	Ripstop structure
