Hcalory D30+ Car Cooler with Bluetooth

When you're on the road, what matters most is convenience, reliability, and the assurance that your food and drinks will remain in perfect condition regardless of location or ambient temperature. The Hcalory D30+ with Bluetooth was designed with car trips, camping, RV trips, and spontaneous tenting trips in mind, offering rapid cooling, a spacious 30-liter interior, and a flexible compartment system. The unit operates efficiently, can be powered in several ways, and is gentle on the vehicle's battery, making it ideal for both short trips and longer journeys. It's complemented by quiet operation, a durable build, and practical details that make daily use of the cooler on the go a breeze.

Instant Cooling

A major advantage of the Hcalory D30+ is its ability to lower the temperature in an extremely short time. The cooler can cool the interior to below 0°C in just 15 minutes, allowing you to quickly prepare drinks, snacks, or items requiring lower temperatures. In MAX mode, the unit reaches as low

as -20°C in less than 4 hours, making it suitable for both standard cooling and freezing. Meat, vegetables, ice cream, and other food items can thus retain their freshness and proper qualities even during longer trips and outings outside the city.

Flexible space thanks to Dual Zone

A major advantage of this refrigerator is the well-designed Dual Zone system, which allows you to better adapt the interior to your current needs. A removable divider allows you to split the compartment into two separate zones, so you can cool beverages in one section while maintaining a temperature of around 5°C, and store frozen items—such as meat—in the other at around -18°C. This solution offers much greater flexibility in organizing your supplies while traveling. When you need more space for larger food items, simply remove the divider to create a single large compartment with a capacity of 30 liters.

Energy-efficient operation and multiple power options

The Hcalory D30+ was designed with a mobile lifestyle in mind, which is why it combines performance with reasonable energy consumption. In ECO mode, power consumption is just 0.18 kWh per day, which translates to economical operation and greater comfort during longer trips. The refrigerator can operate both in a car thanks to 12 V / 24 V DC power and at home using 100–240 V AC, making it a practical appliance for both travel and everyday use. What's more, you can also power it outdoors using solar panels and portable power stations, making it ideal wherever access to a traditional power source is limited.

Battery-safe, convenient to use

When using devices in a car, protecting the battery is extremely important, which is why the Hcalory D30+ is equipped with a three-stage cell protection system featuring L, M, and H levels. This solution helps prevent excessive discharge of the vehicle's battery, increasing safety during use in various conditions. Comfort is also enhanced by the low noise level of just 45 dB, ensuring that the running cooler does not disturb the atmosphere inside the car and promotes peaceful rest even at night.

Durable construction and details that make a difference

When it comes to travel gear, both functionality and resistance to harsh conditions matter. The Hcalory D30+ car refrigerator was designed as a robust and durable unit, ready for use on bumpy roads and during rainy camping trips. The manufacturer has also ensured damage resistance, as confirmed by a drop test. Practical design features make everyday use easier, such as built-in LED lighting—useful after dark—and cup holders located on top of the unit. Thanks to these details, the cooler becomes a convenient, well-thought-out companion for every trip.

Included

- Refrigerator
- AC adapter
- Power cord
- User manual

Manufacturer	Hcalory
Model	D30+
Material	ABS+PP
Car use	Universal DC 12/24 V power supply
Home use	Wide AC voltage range 220-240 V
Power consumption	50 W
Lid	Single
Capacity	30 L
Temperature range	With divider removed: -20°C to 20°C for the entire space / with divider inserted: left side -20°C to 20°C, right side 10°C higher than the left side
Battery protection	3-stage voltage protection
Control panel	Touchscreen with LED display
