Model: PDM7020-12

Manufacturer: GRUNDIG

EAN: 4013835534141

Product Code: 1091521

R11,750

Intuitive dictation control: Our slide switch with “Touch Pin”

The Digta 7 has an innovative “Touch Pin“ slide switch. With this switch the user can operate the dictation device by feel, as the “Touch Pin” protrudes from the switch when set on ‘stop’. Moreover the slide switch allows four different operation modes. With a simple adjustment, the customers can select the slide switch version they use most for their Digta 7. That's making it especially practical for those new to the digital experience and for beginners.
By the way: You can also use the Digta 7 as PC microphone. Connect your device easily to the PC via USB cable!

Maintain a trouble-free overview through a high contrast display and self scaling dictation bar

The transflective backlit LCD display of the Digta 7 provides clear, high-contrast text and graphic documents in a 160 x 160 pixel display with 16 grayscales . The contrast will be intensified with bright surrounding light or direct sunlight. Fields with a gray background organize the displayed information on the Digta 7 into clearly structured groups. The active settings are clearly emphasized. The self-scaling progress bar in the display of the Digta 7 shows the length of the dictation. This allows you a clear overview - independent of the dictation length recorded on your Digta 7.

Easier Dictation thanks to “Easy Mode”

The Digta 7 includes „Easy Mode“. With this mode the functions on the display have been honed down to the essentials. Especially users who want to switch over from analogue dictation to digital dictation, appreciate this function. They benefit from the operating comfort of the Digta 7 without the need to change a lot.

Internal memory, protected from access - extendable with DigtaCard

Like other digital hand-held dictation devices from Grundig Business Systems, the Digta 7 has a real internal memory. It can be protected by the unit's PIN. That, together with 256 bit encryption, provides maximum protection against the loss of sensitive data.
More than 300 hours of voice recordings in the DSS format can be done with the Digta 7 with its 2 GB internal memory. Moreover an external SD memory card can also be used.
