AMZCHEF Piston Coffee Machine

The AMZCHEF CE-AZ-EM1501-SV is a 1350-watt, 20-bar piston coffee machine that heats up in about 30–40 seconds and allows you to prepare espresso, latte, or cappuccino. It features a steam wand for frothing milk, a cup warmer, and a removable 1.2-liter water tank. It offers single and double shot modes and the ability to program your own drink volume, while its compact dimensions (approx. 31 × 12 × 30 cm) and stainless steel housing make it easy to fit into any kitchen.

Fast heating and efficient operation

The 1350 W heating system allows the machine to be ready for use quickly, reducing the wait time for your first cup of coffee. Being ready in about 30–40 seconds is particularly useful when you want to prepare a drink quickly without a long warm-up period. This feature enhances the convenience of

daily use and allows you to enjoy the machine more spontaneously.

20 bar pressure and intense coffee flavor

The 20-bar pressure pump allows for a fuller aroma to be extracted from the coffee during brewing. As a result, the espresso has a more pronounced flavor and a characteristic layer of crema on the surface. The appropriate pressure supports the brewing process, resulting in a more intense and deep flavor profile.

Brew modes and customization features

The machine offers a choice of single or double shots, allowing you to adjust the amount of coffee to your current needs. Additionally, you can program your own extraction time, making it possible to set your preferred coffee volume. In practice, this means greater control over the flavor and strength of the coffee, without having to manually stop the process each time.

Adjustable steam wand and milk frothing

The built-in steam wand allows you to prepare milk foam for cappuccino or latte. Its movable design makes it easy to set the right angle, which translates to more convenient frothing in various cups. There is a cup warming tray on top of the machine, allowing the beverage to retain its temperature longer.

Water tank and ease of use

The removable 1.2-liter tank allows you to prepare several coffees without having to refill the water frequently. The transparent design makes it easy to monitor the water level at all times. The ability to quickly remove the tank simplifies filling and cleaning, which translates to greater ease of use.

Compact design and stainless steel housing

With dimensions of approximately 31 × 12 × 30 cm, the coffee maker takes up relatively little space on the kitchen countertop. The stainless steel housing ensures the machine's durability and makes daily cleaning easier. The combination of a compact form and sturdy materials means the machine

fits well into various kitchen spaces. The coffee maker uses a 51 mm diameter portafilter, which is important for those who want to use additional accessories. This size allows you to choose a compatible tamper or other coffee preparation tools. This makes it easy for the user to expand their set and better tailor the brewing process to their own preferences.

Included

- Coffee maker
- Portafilter
- Filters x 2
- 2-in-1 measuring scoop with tamper
- User manual

Manufacturer	AMZCHEF
Model	CE-AZ-EM1501-SV
Device type	Portafilter coffee machine
Power	1350 W
Pump pressure	20 bar
