

GARRETT Knife-Shovel

Model: 1626200

Manufacturer: GARRETT

EAN: 786156004139

Product Code: 1091920

R1,776

GARRETT Shovel-Knife

Searching with a metal detector requires equipment that can keep up with you in all conditions, which is why the GARRETT shovel-spade comes to the rescue. A sturdy carbon steel construction, a serrated blade for cutting through roots, and an ergonomic handle with a non-slip coating create a tool you can rely on in the field. Its thoughtful design and compact size make it ideal for both precise digging and quickly retrieving finds. The set also includes a practical belt holster, so you always have it at hand. It's an essential piece of equipment for any exploration enthusiast.

Durability You Can Count On

The construction, based on high-quality carbon steel, makes the tool resistant to heavy loads and harsh terrain conditions. A blade length of approximately 19 cm and a total working length of approximately 30.5 cm provide the perfect balance between effectiveness and mobility. As a result, the knife-shovel handles both harder ground and work in more demanding locations where precision and control matter.

Ready for tough conditions

The serrated cutting edge is designed for easily cutting through roots and dense turf. It cuts through the ground effortlessly, allowing you to quickly reach hidden objects detected by the metal detector. This solution significantly speeds up fieldwork and lets you focus on what matters most—the discovery.

Comfort and safety in your hand

The non-slip rubber handle, enhanced with an ergonomic thumb groove, guarantees a secure grip and stability even during intensive use. The blade guard protects your hands from contact with the teeth, increasing safety during use. The included holster allows for convenient attachment to your belt, ensuring the tool is always within reach, ready for use at any moment.

A tool designed for precise tasks

The GARRETT knife-shovel was designed for use in various exploration environments—from soft soil to more compact ground. It allows for precise digging, cutting roots, and efficiently slicing through layers of soil, which translates to greater efficiency during exploration. It is important to remember that carbon steel requires proper care—after working in damp conditions, the tool should be cleaned and dried to prevent corrosion and maintain its full functionality for longer.

Included

- knife-shovel
- carrying sheath

Manufacturer	GARRETT
Model	1626200
Blade material	carbon steel

Working blade length approx. 19 cm

Total blade length approx. 30.5 cm
