GARRETT Metal Sand Scoop

Beach prospecting requires equipment that can keep up with you, whether you're working in dry sand or damp soil near the water's edge. The GARRETT metal sand scoop is designed for maximum efficiency and ease of use, combining a durable construction with smart features that make sorting finds easier. The contoured edge makes digging easier, and the special mesh allows you to quickly separate sand from valuable items. Solid construction and an ergonomic handle make working with it smooth and comfortable, even over extended periods. This tool increases your chances of a successful search without unnecessary effort or frustration.

Thoughtful design for working in sand

Every element of the scoop has been designed to facilitate work in demanding, sandy terrain. The rounded working edge allows you to easily dig into the sand and quickly extract material from the spot indicated by the metal detector. The 3/8-inch mesh design effectively filters out sand and fine sediment while retaining most coins, jewelry, and other valuable finds. This allows you to separate

the valuable items from unwanted debris in a single motion.

Durability You Can Count On

In tough conditions, reliability matters, which is why the GARRETT scoop is made of strong, corrosion-resistant anodized steel. This design performs exceptionally well in dry sand as well as in wet or salty environments, maintaining durability and reliability over the long term. The ergonomic and comfortable handle ensures comfortable search sessions. This tool is designed for heavy-duty use and won't let you down on your next treasure-hunting expeditions.

Indispensable for searches near water

Without the right scoop, it's difficult to precisely separate the material and pinpoint the exact location of the find. The GARRETT model solves this problem with a design that allows for quick sifting of the contents in a single, smooth motion. Simply give the scoop a gentle shake to remove excess sand and reveal the hidden object. This tool is specifically designed for use in sand and water, significantly streamlining the entire search process.

Confidence During Searches

Thanks to its appropriately sized mesh (3/8"), the scoop effectively retains valuable items such as coins or jewelry while allowing for the quick filtering out of fine debris. This solution ensures that even with vigorous sifting, you won't lose your finds. Every movement is effective, and every stage of the process is optimized to the maximum for finding what is most valuable.
