LEPRO TB1 RGB Desk Lamp

The Lepro TB1 RGB combines a futuristic design with smart lighting capabilities, transforming an ordinary desk, gaming room, or living room into an atmosphere-filled space. The lightweight design with adjustable rings catches the eye with its unique look, and RGBIC technology allows you to create multicolored lighting effects perfectly synchronized with music, movies, and games. Thanks to the LightGPM 4 system, the lamp projects personalized lighting scenes based on your preferences, photos, or voice commands, learning your style with every use. App support, voice control via Alexa and Google Assistant, and the ability to group-control other Lepro lamps make the TB1 an integral part of your smart home. The Lepro TB1 is a smart atmosphere creator that adapts the lighting to every moment.

Your personal lighting designer

The LightGPM 4 system acts as a personal lighting designer powered by artificial intelligence, analyzing your needs and selecting the right lighting effects based on professional knowledge of

colors and interior atmospheres. Simply tell the app what mood you want to create, and the lamp will independently prepare a tailored composition of colors and effects. Importantly, the algorithm continuously learns your preferences, so subsequent suggestions are even better tailored to your style, favorite moods, and how you use lighting.

Convenient voice control

Forget about scrolling through dozens of preset scenes and complicated configurations. Enhanced voice control lets you naturally tell the app what you want—from mood lighting for a movie night, to dynamic party effects, all the way to a gaming atmosphere inspired by your favorite franchise. The Lepro TB1 responds quickly and intuitively, eliminating the need for traditional remotes or manual parameter adjustments. Additionally, the lamp works with Amazon Alexa and Google Assistant, so you can also control the lighting using voice commands.

Capture the mood with a single photo

Not sure how to describe the lighting effect you have in mind? LightGPM recognizes images and can create a lighting scene based on a photograph. Simply take a photo of the room, and the lamp will select colors that perfectly match the interior, or upload a movie poster, game graphic, or your favorite illustration to instantly give the space a completely new character. This is an extremely convenient solution for those who want to quickly change the atmosphere of a room without manually selecting colors and effects.

RGBIC and music synchronization

The LEPRO TB1 can transform any room into a dynamic, vibrant space full of light and energy. RGBIC technology allows for the display of multiple colors simultaneously, creating smooth transitions and striking light compositions unavailable in standard RGB lamps. LightBeats mode synchronizes the lighting with the rhythm of the music, using the microphone on your phone or the lamp's built-in microphone, so the light reacts to every note and change in tempo. The effect works perfectly while gaming, watching movies, streaming, or hanging out with friends, creating a unique atmosphere tailored to the moment.

Create your own scenes and get inspired by the community

The TB1 offers immense freedom for customization and isn't limited to just presets. You can independently adjust colors, brightness, effect speed, and the configuration of individual light segments, creating fully custom scenes tailored to a specific interior or occasion. The app also lets you draw inspiration from the Lepro community, discover new effects created by other users, and share your own projects. Thanks to this, the possibilities for personalization are practically endless.

A futuristic design that catches the eye

The lamp's modern design immediately stands out from classic desk lamp models. Adjustable rings give it a futuristic character inspired by science fiction, and the combination of high-quality aluminum and durable PVC ensures an elegant look and stability for long-term use. The Lepro TB1 looks great on a gaming desk, in a minimalist living room, or in a creative studio, serving as both practical lighting and a designer decor element.

Smart control from anywhere

The lamp supports 2.4 GHz Wi-Fi and Bluetooth connectivity, allowing you to conveniently manage the lighting via the Lepro app no matter where you are. The ability to create schedules makes it easy to automatically adjust the lighting to your daily routine—you can set soft ambient lighting in the evening, dynamic effects while gaming, or automatic shutdown before bedtime. The group control feature allows you to control multiple Lepro smart lamps simultaneously, creating a cohesive lighting system throughout your home.
