LEPRO SW1-6 RGB Smart LED Strip, 6m

The Lepro SW1-6 strip lets you completely transform the atmosphere of your garden, patio, balcony, or home interior in just a few moments. It offers impressive RGB+CCT lighting, advanced AI features, and convenient voice and app control, allowing you to easily adjust the lighting to any situation—from a quiet evening to an energetic party. Music synchronization technology, the ability to create scenes based on photos, and segmented color control make the lighting look dynamic and modern. Thanks to its IP65 rating, the strip is also perfect for outdoor use, regardless of the weather. Complementing all this is compatibility with Amazon Alexa and Google Assistant, which lets you control the lighting without having to reach for your smartphone.

AI that designs lighting

The Lepro SW1 uses Lepro LightGPM 4 technology, which acts as a personal lighting designer powered by artificial intelligence. Simply tell the app what mood you want to create or what you

need the light for, and the system will suggest the best-suited lighting effects on its own. The more you use the AI feature, the better the algorithm learns your preferences and creates scenes that match your style. It's a convenient solution for those who want to quickly achieve professional-looking lighting without manually adjusting colors and effects.

Convenient voice control

Forget about clicking through dozens of preset scenes and complicated configurations. Advanced voice control lets you tell the Lepro app what effect you want to achieve, and the lamp will adapt to your expectations. You can create a party atmosphere, set up mood lighting for a movie, highlight your gaming setup, or add a festive touch to your garden—all in just a few seconds. The strip also works with Amazon Alexa and Google Assistant, so you can control the light with voice commands. It's worth noting that this model works exclusively with the Lepro app and is not compatible with the Lepro LampUX or Smart Life apps.

Lighting based on photos

You don't have to describe the effect you want to achieve. The Photo-to-Light feature analyzes the photos you upload and automatically creates lighting scenes tailored to their mood and color scheme. Take a photo of your patio, room, or balcony, and the app will suggest the perfect lighting settings for that space. You can also upload a movie poster, artwork from your favorite game, or a photo of a character to instantly create a themed atmosphere tailored to your interests.

Dynamic effects synchronized with music

LightBeats Music Sync technology makes the lighting react to the rhythm of the music, creating dynamic and impressive light animations. The strip is perfect for house parties, get-togethers with friends, evening gaming sessions, or relaxing to your favorite songs. Changing colors and smooth transitions add energy and a modern feel to the space, transforming an ordinary environment into a lively entertainment zone.

Vibrant colors and adjustable white light

Advanced RGBCW-IC technology delivers both vivid, saturated RGB colors and high-quality white light with adjustable color temperature (from warm 2700K to cool 5700K). Thanks to RGBIC technology, the strip supports segmented color control, enabling the creation of multicolored gradients and more advanced light animations. Densely spaced LEDs (up to 81 LEDs per meter, including 27 RGB and 54 white) ensure excellent brightness, uniform illumination, and an attractive visual effect even on larger surfaces.

Ready for year-round use

The SW1 model was designed specifically for outdoor use. The IP65 rating effectively protects the strip from moisture and harsh weather conditions, making it ideal for use on balconies, patios, building facades, or in gardens. The design is rated for operation in temperatures ranging from -20°C to 40°C, allowing you to use the lighting all year round. The included controller and connection cables are also waterproof. However, please note that the 36 V power supply is not water-resistant, so it should be placed inside an installation box and protected from direct sunlight.

Included in the set

- LED strip
- 36V 24W power supply
- controller
- mounting clamps x18
- screws x18
- anchors x18
- cable ties x4
- cable screws x4
- cable anchors x4
- user manual
