SHELLY LOQED Touch 2S Smart Lock (Black)

The Shelly LOQED Touch 2S is a smart, completely keyless door lock with a European-profile cylinder that provides quick and convenient access to your home. Thanks to its new motor, it locks and unlocks the door in just 2 seconds, while Bluetooth and Wi-Fi connectivity enable remote management and integration with a smart home system. The lock can be opened using a smartphone, a PIN code, or by touching the exterior panel, and full integration with the Shelly Smart Control app allows you to create advanced automations and manage access from anywhere.

Fast and Convenient Keyless Access

LOQED Touch 2S eliminates the need to carry traditional keys by offering several convenient methods for opening the door. The Touch to Open feature allows you to unlock the lock with a single touch of the exterior panel when an authorized Bluetooth-enabled phone is nearby. Access can also be granted using the built-in PIN keypad, the mobile app, or the Auto Unlock feature, which

automatically unlocks the door upon detecting an authorized smartphone.

Full control over access

The lock lets you conveniently manage access for household members, guests, and cleaning staff. You can send digital keys to family and friends, share access links with guests, and create schedules specifying when and who has access to your home. In the app, you can also set the door to automatically lock or unlock at a selected time, check the lock's status in real time, and receive notifications every time the door is opened. The lock is also compatible with the Shelly BLU Button Tough 1, which can serve as a keyless way to open the door.

Smart Home Integration

The device works with the Shelly Smart Control app and other Shelly devices. Once you assign the lock to a specific zone or room, you can create automations based on its current status. When you enter your home, the system can automatically turn on the lights or open the blinds, while a change in the lock's status can be used to control other devices in your smart home. The device also supports integration with Google Assistant and Amazon Alexa, enabling voice control.

High Level of Security

The lock's design prioritizes durability and security. The device holds European certifications EN1303, EN 15684, and SKG three-star, and its body is made of stainless steel. Additionally, it features anti-drill protection using hardened steel, a damage-resistant display, and a quiet operating mechanism.

Ready for Any Situation

The included batteries ensure the lock operates for up to a year. Even if they run out completely, there's no risk of losing access to your home—the lock is equipped with an emergency power supply feature. Simply place a standard 9V battery against the two metal contacts located on the exterior panel to temporarily power the device and unlock the door using a PIN code. The Shelly LOQED Touch 2S is compatible only with Euro-profile cylinders. It supports doors up to 110 mm thick (symmetrical) or up to 55 mm thick measured from the cylinder mounting screw, standard PC

spacings of 55, 72, 92, and 110 mm, and a backset of 30 mm or more. It is compatible with multi-point locks featuring three, five, or seven bolts, doors that require lifting the handle to lock, and designs where the cylinder is located above the handle.

Included in the set:

- External panel
- Internal module with door handle
- Wi-Fi bridge
- 8 AA batteries
- Cylinder lock
- User manual
