

Garrett ACE 400i metal detector

Model: 1141560

Manufacturer: GARRETT

EAN: 786156004825

Product Code: 1101569

R10,162

Garrett ACE 400i metal detector

The Garrett ACE 400i is an advanced metal detector designed for people who want reliability, accuracy and full control over the search process. It is perfect for detecting gold jewelry, relics, silver rings, gold coins and many other valuable finds. Its advanced features make it an ideal choice for searching for coins as well as jewelry or antique artifacts.

Stable operation in all conditions

The frequency adjustment function makes it possible to eliminate or minimize interference from electrical installations and other metal detectors. This solution is especially useful when searching in areas with a high volume of electronics or at rallies and group field searches where multiple devices are operating simultaneously.

Full control over your finds

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

The digital target identifier offers a numerical identification scale from 0 to 99, which accurately determines the conductivity of the detected metal. This lets you know which object you are dealing with even before you start digging, significantly increasing efficiency and saving time.

Accurate target localization

The electronic detection, or stationary All-Metal mode, helps determine the exact location of a detected object with surgical precision. This allows for faster and more efficient excavation of finds, without unnecessarily ditching a large area.

Precise Iron Check

The Iron Check function provides increased resolution (more pixels) for more precise iron discrimination levels. This feature is extremely useful in areas littered with metal debris, where valuable objects can be masked by unwanted items such as nails or sheet metal fragments.

Real-time target analysis

Graphic Target Analyzing™ simultaneously displays the conductivity of the detected object and the current discrimination pattern. This gives you a complete picture of the signal and allows you to make an informed decision about whether a target is worth digging up.

Hear the iron before you dig

ACE™ 400I Iron Audio technology lets you hear rejected iron signals that are muted by default. This allows you to identify unwanted flat objects, such as caps or washers, before you decide to dig. In order to use this function, it is necessary to set the iron discrimination level - in the demonstration it is 35. Without Iron Audio, the cap and silver coin sound very similar, while when the function is activated, the cap generates characteristic "murmurs" of iron, signaling that it may be a waste.

Included

- metal detector
- Garrett ClearSound Easy Stow headphones with volume control

- ACE Environmental shield
- search coil cover
- user manual

Manufacturer	Garrett
Model	ACE 400i
Iron Audio function	Supported
Segments for distinguishing iron	4
Notch Discrimination	Adjustable
Search modes	5 (plus pinpoint)
Sensitivity/depth adjustment	8
Digital target identifier	Supported
Pinpoint function	Supported
Frequency	10 kHz, adjustable
Audio identification levels	3
Target depth indicator	Built-in
Search coil	8.5" x 11" DD PROformance™
Length (adjustable)	1.06m - 1.29m
Power supply	4 AA batteries (included)
Battery status indicator	Built-in
One-touch operation	Yes
Camlock locks for greater stability	Built-in
Weight	1.32 kg

Gross weight: 2510, Box length: 54,50, Box width: 36,00, Box height: 13,50, Net weight: 2350,
