## **OPTIMIZED AIR FLOW**

Two 120mm fans aligned vertically on the front to draw in air evenly across the entire face of the enclosure. That will contribute to positive air pressure within the case, the rising warm air will always be exhausted with the rear and top airflow from the MAG Forge 100 Series.

## **READY FOR OPTIMIZED MOTHERBOARD**

Designed with multiple easy installation mechanisms and accommodated an up to ATX motherboard to provide an unhindered building experience.

## **TOOL-LESS TEMPERED GLASS**

The light gray tone of 4mm tempered glass side panel is ideal for displaying RGB lighting effects and provides clear internal component construction.

The Forge 100 Series' thoughtful case design allows users to install/remove the tempered glass easily. Simply place the tempered glass on the stump of the case before installing it for a safe and simple process.

## **PERSONALIZE YOUR GAMING RIG**

ustomizing Addressable RGB LEDs integrated in the front, top & rear cover with a dedicated control button; or with MSI Mystic Light software, MAG Forge 100R can cast millions of colors and effects that can be synchronized with a vast ecosystem of components to augment your build.

### **1 to 6 ARGB LED Control Board**

User can intuitively control & switch 9 lighting effects through the LED switch button.

### **LED Switch Button**

Keep pressing the LED button for three seconds, and then users can control the lighting effects via syncing with the motherboard by MSI mystic light app.
