

RainPoint 3- Zone WiFi Irrigation Controller

Model: HTV345FRF

Manufacturer: RAINPOINT

EAN: 5905156104754

Product Code: 1236299

R1,958

RainPoint 3-Zone WiFi Irrigation Controller

The RainPoint 3-Zone WiFi Irrigation Controller lets you conveniently manage watering for your garden, lawn, or flower beds right from a mobile app. The device supports 3 independent irrigation zones, allowing you to set separate schedules for different parts of the garden and adjust water volume to suit specific plants. The model offers a weather-dependent automatic watering feature, water usage monitoring, and the ability to manually start irrigation without changing the saved settings. The controller works with Amazon Alexa and Google Assistant; however, the RainPoint Gateway is required to use the WiFi and smart control features, which is not included in the set and is sold separately.

Three independent sections for greater convenience

The controller is equipped with one water inlet and three water outlets, allowing you to create separate watering zones for different areas of the garden. You can set different schedules for the lawn, flower beds, greenhouse, or vegetable patches without having to manually change the settings every day. This solution helps you better manage water consumption and adjust watering frequency to the type of plants. Compatibility with standard 3/4" garden connectors makes installation quick and requires no additional plumbing modifications.

App Control and Smart Features

When connected to the RainPoint Gateway, the controller allows for remote irrigation management via a mobile app. This lets you start or stop watering even when you're not at home. Integration with Google Assistant and Amazon Alexa also allows you to control the device using voice commands, which enhances the convenience of daily use. The device also offers several operating modes, including classic watering, interval mode, and the Cycle & Soak feature, which helps evenly hydrate the soil and reduce water runoff.

Weather-Adaptive Automatic Watering

The controller utilizes smart irrigation features that can automatically pause watering during rain or adverse weather conditions. This solution helps reduce excessive water consumption and minimizes the risk of overwatering plants. A built-in flow meter allows you to monitor water usage, making it easier to control costs and the efficiency of the entire system. The manual start function, meanwhile, lets you quickly begin watering at any time without having to change saved schedules.

Robust design for outdoor use

The RainPoint model is designed to operate in variable weather conditions. The IP65-rated housing helps protect the device from moisture and splashes, and an additional sealing ring reduces the risk of water entering the controller. The manufacturer has also included a built-in metal filter that helps trap fine debris present in the water system. The device operates at pressures ranging from 0.5 to 8 bar and supports water flow rates from 5 to 35 liters per minute, making it suitable for most home irrigation systems.

Included in the package
