

QiDi Chamber Heater for the Max4 Series

Model: M4CH

Manufacturer: QIDI

EAN: 744581223259

Product Code: 1279190

R1,958

QiDi Chamber Heater for the Max4 Series

Maintaining the proper conditions inside the build chamber is crucial for the quality of 3D prints. The QiDi heater designed for Max4 series printers is equipped with an integrated fan, ensuring uniform heating of the interior and maintaining a constant temperature during operation. This solution helps maintain a stable printing environment, reduces the risk of material warping, and ensures proper adhesion between layers. It is a practical consumable that helps you fully utilize your printer's capabilities and achieve high-quality printed models.

Optimal conditions for demanding materials

The device's design ensures effective heating of the print chamber, which is particularly important when working with materials that require strictly controlled conditions. Maintaining a stable temperature helps reduce stresses that arise during printing and minimizes the risk of warping. A properly heated working environment also improves layer adhesion, which translates to greater print

accuracy and more satisfying final results.

Integrated fan and even heat distribution

The heater is equipped with a fan that promotes even heat distribution inside the chamber. As a result, the temperature remains at the appropriate level throughout the device's operation, and the printing process takes place under more predictable conditions. This solution facilitates the creation of precise models and helps minimize common issues that arise when working with temperature-sensitive materials.
