Precision and realism

The PXN-V9Gen2 steering wheel features a 16-bit magnetic encoder that provides exceptional precision and stability, enabling accurate real-time recording of movements. With two built-in vibration motors, the device offers an adaptive vibration stage that adjusts to changes in the game, heightening the realism of the simulation and blurring the line between the virtual world and reality.

Advanced features and personalization

Play the way you like to play. The PXN-V9Gen2 steering wheel offers customizable buttons. There is also a dedicated app that allows you to adjust parameters, so you can easily adjust the hardware's performance to your preferences. The Cyber Style RGB Lighting Effect function provides a unique look and informs you of gear shifts with an RGB light bar on both sides of the wheel.

Comfort during gameplay

Ergonomic button placement and the steering wheel's soft TPE rubber coating ensure comfort during prolonged use. The PXN V9 Gen2 is perfect for track, rally and drift racing. Physically switching the steering angle between 270° and 900° allows you to customize the device for different types of games.

Feel like behind the real steering wheel

The 6+R manual transmission simulates the realistic feel of shifting gears in real vehicles, while the handbrake function and high/low shifting capabilities add realism and excitement to your gaming experience. High-sensitivity magnetic-sensor linear pedals accurately register pressure, while textured folding foot pads and a non-slip design ensure stable operation without sliding.

Included:

- PXN V9 Gen2 steering wheel
- Hall pedals
- 6+R gearbox
- Steering wheel mounts x2
