

# SwitchBot Video Doorbell Smart Video Doorbell

Model: W6702001

Manufacturer: SWITCHBOT

EAN: 810150546163

Product Code: 1300536

## R3,582

### SwitchBot Video Doorbell

The SwitchBot Video Doorbell gives you full control over what's happening at your doorstep—no matter where you are. With 2K video and a wide-angle view, you can see exactly who's at the door and if a package has been left, and the two-way audio feature lets you respond immediately without leaving your home. Long battery life and no mandatory monthly fees make using the device convenient and cost-free, while smart notifications enhance your sense of security every day.

### Clear image and wide field of view

The camera records in 2K Ultra HD resolution, which translates to highly detailed footage and easier recognition of people or objects. The wide 165° field of view and 16:9 aspect ratio allow you to capture not only the space directly in front of the door but also the area near the floor, so you can see both the visitor's face and any packages left behind. The built-in full-color night mode uses LED lighting, so even after dark, the image remains clear and more natural than with standard infrared

modes.

## **Two-way communication and quick responses**

The video intercom enables real-time voice communication, allowing you to conveniently speak with a delivery person or visitor without opening the door. In situations where you cannot answer the call, a quick reply feature is available that automatically plays a pre-recorded message. This allows you to stay in contact with the person at the entrance and convey basic information without engaging in a conversation.

## **Long-lasting battery and convenient power supply**

The device is equipped with a 5000 mAh battery, which ensures long operating time and reduces the need for frequent charging. ECoPower technology further optimizes energy consumption, which in practice means greater independence from a power source. The video intercom can be charged via a USB-C port, and an optional solar panel allows the device to remain operational for extended periods without user intervention.

## **Smart notifications and stable operation**

The system detects human movement and automatically sends notifications to your smartphone, allowing you to quickly respond to any activity at the door. The use of AI detection reduces the number of false alarms, making notifications more accurate and useful. The built-in monitor also functions as a Wi-Fi repeater, which improves the stability of the 2.4 GHz connection and allows the device to operate even without internet access.

## **Data Security and No Fees**

The video doorbell offers local storage of recordings on a microSD card, and a 4 GB card is included in the set. The device supports storage media with capacities up to 512 GB, providing ample space to record events without the need for a subscription. Additionally, an optional cloud service with a trial period is available, though the basic features work fully without any fees. The system allows for the storage of up to several thousand recordings, enabling you to keep a history of visits and events.

## Integration and smart home features

The SwitchBot Video Doorbell works with Alexa, allowing for quick video previews via voice commands. Support for Home Assistant via RTSP and the Matter standard makes it easy to integrate the device into an existing smart home system. When paired with a compatible SwitchBot lock, you can also use the NFC door-opening feature, which extends the device’s functionality to include access control.

## Durable construction and easy installation

The housing meets the IP65 standard, meaning it is dust and rain resistant, making the device suitable for outdoor installation. Its compact dimensions and light weight facilitate installation, which can be done using mounting tape or screws. Additional components allow the device to be angled, helping to adjust the field of view to a specific entrance. To ensure stable operation, it is recommended to mount the monitor at an appropriate distance from the doorbell and near the router.

## Included

- Doorbell with camera
- Indoor monitor
- User manual
