REDTIGER F7NP WiFi 4K + 1080p Dash Cam with 128GB Memory Card

The REDTIGER F7NP dashcam with a 128 GB microSD memory card is equipped with a dual 4K + 1080P recording system, allowing it to capture the situation both in front of and behind the vehicle in very high detail. The front camera records in 4K UHD 2160P resolution, and the rear camera in Full HD 1080P, allowing you to clearly capture license plates, road signs, and the sequence of events even after dark. The use of the Sony STARVIS 2 sensor, HDR/WDR technology, and wide-angle lenses (170° in the front and 140° in the rear) ensures better visibility in difficult lighting conditions and a wider field of view on the road.

Excellent image quality day and night

The F7NP model uses an advanced Sony STARVIS 2 sensor, which improves recording quality after dark and increases the amount of detail captured in challenging lighting conditions. A bright F1.8 lens, 6-layer optics, and HDR and WDR technologies help maintain the right balance between bright and dark areas of the image, ensuring that recordings remain clear while driving at night, in tunnels, or in strong headlight glare. The camera delivers clear, high-contrast footage during both daily commutes and longer trips.

Fast Wi-Fi 6 and convenient app control

Built-in 5.8 GHz Wi-Fi 6 allows for fast downloads of recordings at speeds of up to 20 MB/s without having to remove the memory card. Using the Redtiger Cam app, you can conveniently view live footage, play back videos, download recordings, and manage camera settings directly from your smartphone. The system also allows you to check GPS data, such as the route, location, and vehicle speed. Additional convenience is provided by the ability to transfer files via a USB-C cable without using a card reader.

Round-the-clock vehicle protection

The REDTIGER F7NP supports 24/7 parking mode, which helps monitor the vehicle even after you've finished driving. The camera works with a G-sensor that detects collisions and shocks—upon detecting an event, it automatically saves and locks the recording so it isn't overwritten. Low-bitrate time-lapse recording is also supported, enabling long-term monitoring while parked. A Hardwire Kit (sold separately) is required for parking mode operation.

Loop recording and ample storage space

The loop recording feature allows the camera to operate continuously without the need to manually delete files. When the memory card is full, the oldest footage is automatically overwritten, while important recordings remain protected from deletion. The dashcam supports microSD cards with capacities up to 512 GB, providing ample storage for 4K footage. The package includes a 128 GB memory card, so the device is ready to use immediately after installation.

Stable operation even in harsh conditions

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

The REDTIGER F7NP uses a supercapacitor instead of a traditional lithium battery, which translates to greater resistance to high temperatures and a longer device lifespan. This solution improves operational stability during long trips and when the car is parked on hot days.

Convenient installation and clear display

The dashcam is equipped with a 3.18-inch IPS display, allowing you to conveniently view recordings and manage device settings directly from the camera. The model also uses a suction cup mount with a GPS holder, which facilitates installation and ensures stable placement of the device on the car windshield.

Included in the set:

- Dashcam
- 1080p rear camera
- 128 GB microSD memory card
- GPS mount
- USB-C power cable with car charger
- Rear camera cable
- Cable clips x5
- Electrostatic stickers x2
- Cable management tool
- User manual

Manufacturer	REDTIGER
Model	F7NP128G
Channels	2-channel (front + rear)
Sensor	F7NP Upscaled Sensor
Video resolution	Front 4K (2160P), rear 1080P
Display	3.18 inches
Lens aperture	F1.8
