REDTIGER F9 WiFi 4K + 1080p Dash Cam

The REDTIGER F9 is a dual-channel 4K + 1080p dash cam that provides detailed footage of the area both in front of and behind the vehicle. The front camera records in Ultra HD 2160P quality, allowing you to easily capture license plates, road signs, and surrounding details even while driving at high speeds. High-end optics with a bright F1.5 aperture, WDR, and Super Night Vision technologies ensure a clear image even after dark and in low-light conditions. The F9 model also features dual-band Wi-Fi, a GPS module, mobile app support, and convenient voice control, making it perfect for both daily commutes and longer trips.

Record your route in 4K

The REDTIGER F9 front camera records video in 4K 2160P resolution at 30 frames per second, ensuring a high level of detail when recording your route. The rear camera records footage in Full HD 1080P, creating a complete record of the situation around the vehicle. The wide viewing angle of

160° at the front and 155° at the rear allows you to cover a larger area of the road, reducing blind spots and increasing safety while driving. The dashcam works great in both city traffic and on the highway, helping to document traffic incidents, maneuvers, and parking situations.

Clear images even at night

The use of a bright F1.5 aperture in the front camera and F2.0 in the rear camera allows the camera to capture images more effectively after dark. WDR and Super Night Vision technologies ensure better light balancing and improved visibility in challenging conditions, such as night driving, tunnels, intense street lighting, or headlights from other vehicles. As a result, recordings remain clearer and more detailed regardless of the time of day.

Control via app and Wi-Fi

The dashcam supports dual-band Wi-Fi (5.8 GHz and 2.4 GHz), enabling a fast connection to your smartphone via the Redtiger Cam app. From your phone, you can view a live preview, play back recorded footage, download videos, manage camera settings, or share content without having to remove the memory card. The app also supports OTA updates, allowing you to conveniently update the device's software.

GPS recording route and speed

The GPS module built into the mount records data on location, route, and vehicle speed. This allows the recordings to serve as even more accurate documentation of your trip or traffic incidents. The REDTIGER Player software for Windows and Mac allows you to simultaneously play back footage from both cameras and display the route on Google Maps.

Vehicle protection while parked

The REDTIGER F9 offers a parking monitoring feature that operates for up to 24 or 48 hours. Upon detecting an impact via the G-sensor, the camera automatically saves and locks the critical footage to prevent it from being overwritten. A Time-Lapse mode is also available, allowing you to record long parking sessions while using less memory. To use parking mode, an additional Hardwire Kit is required to provide a constant power supply to the camera (sold separately).

Automatic Loop Recording

The camera supports microSD cards with capacities ranging from 32 GB to 256 GB and automatically overwrites the oldest files once the memory is full, so you don't have to manually delete recordings. The device saves videos in TS format and photos in JPG. The system operates fully automatically—the camera starts recording when the vehicle is turned on and is ready to use without additional configuration.

Convenient operation and practical design

The device is equipped with a USB-C port for power, an AV-IN input for a rear camera, and a microSD card slot. A short press of the power button allows you to quickly lock or unlock a recording, while holding it down resets the device. Additional convenience is provided by voice prompts informing you, among other things, when recording begins or when memory card formatting is complete. The camera operates reliably in temperatures ranging from approximately -20°C to 70°C, making it ideal for use both in winter and on hot days.

Included:

- Dashcam
- 1080p rear camera
- Rear camera cable
- Power cable
- Car charger
- Mount with built-in GPS
- Adhesive tape
- Electrostatic sticker
- Pry tool
