REDTIGER F7N Pro WiFi 4K + 1080p Dash Cam

The REDTIGER F7N Pro is a dash cam that simultaneously records footage from the front and rear of the vehicle in 4K UHD and 1080p Full HD. The front camera captures detailed footage at 3840 × 2160P resolution, while the Full HD rear camera provides additional protection during daily driving and parking. Thanks to the Sony STARVIS 2 sensor, HDR/WDR technology, a bright f/1.5 aperture, and wide viewing angles of 170° and 140°, the device effectively captures road conditions both during the day and after dark. The F7N Pro model also offers fast 5.8 GHz Wi-Fi 6, a GPS built into the mount, and a durable supercapacitor resistant to extreme temperatures.

4K UHD recording in front and Full HD in the rear

The REDTIGER F7N Pro dashcam allows simultaneous recording from two cameras, providing a complete record of the situation around the vehicle. The front 4K UHD camera captures more details, such as license plates, road signs, and the sequence of events on the road. The 1080P Full HD rear

camera enhances safety when reversing, parking, and in the event of a rear-end collision. Wide viewing angles of 170° at the front and 140° at the rear effectively reduce blind spots and allow for a wider view of the road.

Sony STARVIS 2 and clear images after dark

The F7N Pro model is equipped with a modern Sony STARVIS 2 sensor, which offers higher light sensitivity than standard STARVIS sensors. The combination of HDR/WDR technology, a bright f/1.5 aperture, and a 6-layer glass lens improves the quality of nighttime recordings, increases contrast, and reduces overexposure from headlights or streetlights. Advanced image processing helps reduce glare and distortion, ensuring that recordings remain clear even when driving at night or in difficult weather conditions.

Wi-Fi 6 and the REDTIGER Cam app

The camera supports fast Wi-Fi 6 on the 5.8 GHz band, which allows for wireless transfer of recordings to a smartphone at speeds of up to 20 MB/s. Downloading a 1-minute 4K recording takes about 10 seconds, allowing you to quickly secure important footage after a traffic incident. The REDTIGER Cam app for Android and iOS allows you to view live footage, change settings, edit footage, share recordings, and perform wireless OTA updates.

Built-in GPS and accurate route tracking

The GPS module integrated into the mount records the vehicle's location, route, and current speed directly within the recordings. This provides you with detailed trip documentation that can be helpful when analyzing traffic incidents or filing insurance claims.

Durable supercapacitor

The supercapacitor used ensures greater durability and more stable operation than traditional batteries. This solution improves the device's resistance to high and low temperatures ranging from -20°C to 70°C, making the dashcam suitable for use both in winter and on hot days.

Loop recording and smart G-Sensor

The camera automatically overwrites the oldest recordings once the memory is full, allowing it to continuously record your route without the need to manually delete files. You can choose recording intervals of 1, 3, or 5 minutes. The built-in G-Sensor detects sudden braking, collisions, and sudden shocks, and automatically protects the associated recording from being overwritten, safeguarding the most important evidence.

Vehicle Protection While Parked

The REDTIGER F7N Pro offers 24/7 parking monitoring to help protect your vehicle even after you've finished driving. Upon detecting an impact, the camera automatically saves and locks a 15-second recording of the event. A Time-Lapse mode is also available, enabling long-term time-lapse recording with lower power consumption. The parking monitoring feature requires the use of an additional Hardwire Kit (sold separately).

Thoughtful design and flexible installation

The dashcam is equipped with a 180° adjustable GPS mount, which makes it easy to set the correct recording angle. The rear camera offers 360° rotation, allowing it to record both the view behind the vehicle and the interior of the cabin. The Mirror Flip and vertical rotation features increase installation flexibility in various types of vehicles. The package is completed by a USB-C port for convenient device power supply.

Included:

- Dashcam
- 1080P rear camera
- Mount with GPS module
- USB-C power cable with car charger
- Rear camera cable
- Electrostatic stickers x2
- Spare adhesive sticker
- Upholstery prying tool
- User manual
