WOLFBOX G930 4K + 1080p 64GB Dash Cam

The WOLFBOX G930 is a rearview mirror-style dash cam equipped with a 4K UHD (2160P) front camera and a 1080P rear camera. The large, 10-inch touchscreen IPS display allows you to conveniently manage settings and view real-time footage. The device features a GPS module, Wi-Fi connectivity, loop recording, a G-sensor, and parking mode. By combining the functions of a rearview mirror and a dashcam, the G930 helps you record your journey, giving you greater control over the situation on the road whether you're driving or parked. The package includes, among other things, a 64GB SD card.

Detailed 4K UHD Video

The front camera records footage in 4K UHD resolution, allowing you to capture more detail compared to standard Full HD dashcams. Higher image quality can make it easier to identify license plates, road signs, and other important elements of the surroundings. An additional rear camera

recording in 1080p provides a broader view of events around the vehicle. Thanks to simultaneous recording from both cameras, the driver receives more comprehensive video footage of the trip.

Large IPS Screen and Intuitive Touch Control

The 10-inch IPS display provides a clear image and wide viewing angles. Touch control allows for quick switching between functions, changing settings, and convenient access to saved recordings. The large screen size enhances the user experience during everyday driving. The mirror-style design also ensures that the dashcam blends seamlessly into the car's interior.

Parking Mode and Protection of Important Recordings

The dashcam is equipped with a vehicle monitoring function while parked. When using the appropriate power kit for parking mode, the device can continue recording events even after the engine is turned off. The G-Sensor detects sudden shocks or collisions and automatically protects key recordings from being overwritten. The loop recording feature, meanwhile, allows for continuous recording without the need to manually delete older files.

Better visibility after dark thanks to WDR technology

The G930 model uses WDR technology, which helps balance bright and dark areas of the frame. This allows the camera to capture images more effectively while driving at night, in tunnels, or in strong outdoor lighting. Reducing overexposure and underexposure results in clearer video footage. This solution enhances the usability of recordings regardless of lighting conditions.

GPS and Wi-Fi for More Convenient Recording Management

The built-in GPS module allows you to record information about your route and the vehicle's location. This data can later be reviewed alongside the recordings, making it easier to analyze your trip. Wi-Fi connectivity allows you to conveniently manage your recorded footage and device settings. This makes accessing recordings faster and more convenient without having to connect the dashcam to a computer every time.

Included in the set
