WOLFBOX i07 WiFi 2.5K + 1080p Dash Cam

The WOLFBOX i07 is a state-of-the-art dash cam equipped with three cameras that simultaneously monitor the road ahead, the vehicle's interior, and the area behind the car. The front camera records in 2.5K resolution, while the rear and interior cameras capture video in 1080p quality. The device features a WiFi module, built-in GPS, a 3-inch IPS screen, a G-Sensor, loop recording, and two parking modes. Support for memory cards up to 512 GB, a USB-C port, and the ability to operate in temperatures ranging from -20°C to 70°C make the dashcam ready for everyday use all year round.

Three cameras for a complete view of the situation

The WOLFBOX i07 records footage simultaneously from three different angles, allowing you to accurately document your journey. The 2.5K front camera provides more detail than standard Full HD recordings, which can make it easier to identify vehicles, road signs, or other important elements. The interior camera monitors the passenger compartment, while an additional rear—

camera records the area behind the vehicle. This solution expands the monitoring range and allows for the collection of more footage in the event of unforeseen incidents on the road.

Effective recording even after dark

The interior camera is equipped with six IR LEDs, which improve visibility inside the vehicle when driving at night. This allows the dashcam to record footage even when lighting inside the cabin is limited. This is particularly useful for professional drivers, passenger transport operators, and users who frequently travel after dark. Better visibility means clearer recorded footage and easier analysis of recorded situations.

Built-in WiFi and GPS

The WiFi module allows for a convenient connection between the dashcam and a smartphone, making it easier to view and download recordings without removing the memory card. This makes accessing recorded footage faster and more convenient. The built-in GPS module records route information, which can be helpful when analyzing traffic incidents. The combination of these features makes managing recordings much simpler than with traditional dashcams.

Automatic protection of important recordings

A G-Sensor responsible for the safety of saved footage detects sudden shocks, collisions, and abrupt maneuvers. Upon detecting an event, the device automatically protects the current recording from being overwritten. At the same time, the loop recording feature allows for continuous video recording without the need to manually delete older files. This ensures efficient use of memory while keeping the most important recordings protected.

Vehicle protection while parked

The dashcam offers two parking modes that help monitor the car even after you've finished driving. The shock-detection recording feature automatically saves footage in the event of a collision or impact while parked. A time-lapse mode is also available, allowing for long-term monitoring with reduced memory usage. The 1080p rear camera lets you capture footage behind the vehicle in case of an unexpected situation.

Easy installation and convenient operation

The compact design and sliding mounting bracket make it easy to install the device on the windshield. The manufacturer has included a system that allows for quick detachment of the dashcam from the bracket, which can be convenient when moving the device between vehicles. The 3-inch IPS screen provides a convenient preview of recordings and settings. An additional advantage is its temperature resistance from -20°C to 70°C, allowing the device to operate in both winter frosts and summer heat.

Included in the set

- WOLFBOX i07 dashcam
- 1080p rear camera
- Power cable with car charger
- Mounting stickers x 2
- Electrostatic stickers x 4
- Cable clips x 5
- Lens cleaning cloth
- Installation tool
- User manual

Manufacturer	WOLFBOX
Model	i07
Front camera	2.5K
Interior camera	1080p
Rear camera	1080p
Screen	3.0" IPS
