EMEET Prime SE Webcam

The EMEET Prime SE is a webcam designed for streaming and content creation, equipped with a 1-inch Sony IMX 06A sensor, 4K video support, Software HDR, PDAF autofocus, and two lenses—wide-angle and telephoto. The device captures video at resolutions up to 3840 × 2160 at 30 fps, and its phase-detection autofocus can lock focus in as little as 0.2 seconds. It also features a 12x hybrid zoom, 2x optical zoom, 4x digital zoom, an HDMI 1.4 output, a USB-C port, and two microphones with a range of up to 3 meters. The EMEET Prime SE also allows you to work in portrait or landscape orientation, making it ideal for live streams, video recordings, presentations, and online meetings.

Two Lenses and Versatile Framing Options

The wide-angle lens offers an 85.1° field of view, allowing you to capture a larger portion of the room or workspace during presentations and broadcasts. The telephoto lens, with a 49.1° field of view, makes it easier to achieve a tighter frame when you want to focus the viewer's attention on a person or an object being presented. Combining 2x optical zoom with digital zoom provides up to 12x hybrid

zoom, which gives you greater freedom to adjust the frame without having to constantly reposition the camera. Switching between wide and narrow shots can be useful, for example, when presenting products, hosting live sales broadcasts, and recording content that requires both wide shots and close-ups.

4K Video, Software HDR, and Fast Autofocus

The EMEET Prime SE captures video at up to 4K 3840 × 2160 resolution at 30 fps and uses Software HDR, which helps balance exposure and preserve details in both bright and dark areas of the frame. PDAF autofocus automatically adjusts focus, and the focusing range from 10 to 300 cm allows you to easily switch from standard face shots to close-ups of objects closer to the lens. The PDAF mechanism can focus in about 0.2 seconds, which helps you quickly regain a sharp image after moving the product or changing the frame. The 1-inch sensor also helps capture more detail, produce a cleaner image in low light, and achieve a more natural depth of field.

HDMI 1.4, USB-C, and Convenient Operation During Streaming

The EMEET Prime SE supports simultaneous video output via HDMI and USB-C, making it easier to use the camera in a more sophisticated streaming setup. Via HDMI, the device transmits video at a resolution of 3840 × 2160 at 24, 25, or 30 fps, 2560 × 1440 at 30 or 60 fps, and Full HD at up to 60 fps. The USB-C connection, on the other hand, allows for direct connectivity to a computer without the need for a capture card. The camera is compatible with OBS, Twitch, YouTube, Facebook, XSplit, and ManyCam, among others, and its settings can be further customized in EMEET STUDIO.

Features for Content Creators and Stable Performance

The camera has two built-in microphones with a range of up to 3 meters, and the standard 1/4-inch thread allows it to be mounted on a compatible tripod or mount. The Prime SE also supports a 2.4 GHz remote control, which allows you to remotely adjust the frame and use saved position settings, while the cold shoe mount and wired microphone input enable you to expand your setup with additional accessories. The model is also designed for long broadcasts—it has an MTBF certification of 520 hours, and its all-metal thermal design is intended to support stable operation during sessions lasting many hours. With EMEET STUDIO, you can adjust image settings, use features related to image appearance, whiteboard mode, and local recording; the camera is compatible with Windows
