Ultimea Aura S5T Soundbar

The Ultimea Aura S5T is a comprehensive 7.1 Dolby Atmos audio system that delivers immersive sound, enveloping the listener from all sides. The set consists of a main unit equipped with three full-range polymer drivers, two front surround speakers, two rear surround speakers, and a 5.25" wired subwoofer. This system is designed for rooms ranging from 20 to 35 m², offering a realistic experience while watching movies, gaming, and listening to music.

Dolby Atmos and True 7.1 Sound

Support for the Dolby Atmos standard and a 7.1 configuration create a multidimensional soundstage where audio effects come from various directions. The system utilizes LS, RS, LRS, RRS, L, C, and R channels along with a wired subwoofer, ensuring that dialogue remains clear while special effects and soundtracks gain greater depth and realism.

Powerful sound and deep bass

Three full-range polymer drivers ensure accurate sound reproduction, delivering high-quality audio. Two front surround speakers expand the width and depth of the soundstage, while two rear surround speakers enhance the immersive effect. A 5.25" subwoofer handles the low frequencies, which, combined with BASS MX technology, delivers deeper and richer bass.

SurroundX™ technology for greater precision

Advanced SurroundX™ technology ensures precise processing of spatial effects. With 99.99% accuracy in reproducing audio details, you can better hear subtle elements of the audio track and enjoy a more realistic listening experience.

Highest-quality audio transmission

Thanks to HDMI eARC technology, the soundbar enables the transmission of audio in the highest quality, allowing you to take full advantage of Dolby Atmos. The enclosure also features Optical, USB, AUX, FR, FL, Sub Out, and DC In connectors, making it easy to connect various signal sources and expand your home audio system.

Bluetooth® 6.0 and convenient music playback

The soundbar utilizes the latest Bluetooth® 6.0 technology, which ensures faster and smoother wireless transmission. A dedicated app allows for convenient management of the device's settings. Users have access to 121 predefined EQ presets, ready-made sound profiles such as Bass, Rock, Pop, and Classical, as well as a 10-band equalizer covering frequencies from 31 Hz to 16 kHz. This allows you to precisely tailor the sound to your preferences.

Smart control and software updates

The app allows you to monitor the device's status, manage audio sources, adjust the volume, and install new software versions. The manufacturer has provided updates that improve, among other things, EQ effects and midrange quality. Additional convenience is provided by the ability to control the TV and soundbar with a single remote, which simplifies daily use of the entire system.
