the use of crop residues. Compostable and biodegradable material, it effectively replaces plastic with the hardness and durability required in commercial products.

ECO BAMBOO MATERIAL

From sustainable forests, bamboo is the most environmentally friendly wood of all thanks to its enormous capacity for growth using minimal resources. Bamboo brings beauty and naturalness to MS-ECO, as well as replacing the need to use plastic or other polluting materials.

BLUETOOTH 5.1

We incorporate advanced Bluetooth 5.1 for maximum energy savings, wireless connection stability under any circumstances, super low latency and high-fidelity sound quality with advanced codecs. In addition, its connection is ultra-easy and automatic once paired.

COMPACT WITH GREAT AUTONOMY

Super compact size and a small battery to minimize environmental impact. Thanks to Bluetooth 5.1 and advanced energy saving systems, you will get up to 5 hours of use. So you can enjoy it anywhere.

BE PLASTIC SMART PROJECT

It is a reality that the seas and oceans are the largest recipients of garbage and plastics and that they receive between 8 and 10 million tons of garbage per year, which has caused the formation of 5 islands of garbage and micro plastics in the Pacific, Atlantic and Indian oceans, and which results in, in addition to the pollution and release of chemicals or entanglement of marine animals among others, the presence of micro plastics in food of marine origin and, consequently, in the food chain itself.

ECO BIOLOGICAL MEMBRANE MATERIAL

Clean, balanced and powerful sound thanks to the use of a biological membrane in the sound driver. Enjoy excellent sound quality while protecting the environment.

ECO-FRIENDLY PACKAGING

Made from recycled materials and reduced to the smallest possible size. In addition, we eliminate all unnecessary waste-generating materials by printing the manual on the packaging itself. Minimizes the CO2 footprint.
