ideal for specialist pursuits such as bird and aviation photography. Lightweight, powerful and compact with excellent image stabilisation for handheld shooting, the Diffractive Optic (DO) design, along with the RF lens mount and a fixed, F11 aperture, helps make it a more compact lens and easier to pack into a travel bag. Designed for Canon's Full Frame mirrorless cameras, its RF lens mount offers a faster communication speed than a conventional DSLR. Smooth and silent focusing from the STM motor is a real advantage too, particularly for video.
