Fiber optic cable is highly resistant to EMI and RFI interference

Premium metal connectors

Gold plated connectors for perfect image quality

Compatible with all devices that support DisplayPort

- Active Optical Cables (AOC) use fiber optic technology to transport the digital video signal. This means that the signal can be carried much further than with a traditional copper cable (up to 100 m), and reduces the risk of EMI/RFI interference. DisplayPort AOC cables also have dedicated copper power wires inside, so no external power supply is required.
