The dual-handle design is engineered to provide a well-balanced center of gravity and enhance stability when working with your phone. This design makes it easier to execute smooth camera movements and capture more cinematic shots. The grips themselves are contoured to the natural shape of your hands, and their surfaces are coated with non-slip silicone, which improves grip and comfort during longer sessions. Additionally, you can rotate the grips within a smoothly adjustable range, allowing you to freely change their position and adapt the kit to a variety of shooting angles.

Convenient Control

The kit includes a Bluetooth remote control module that works with the PGYTECH PhotoVideo Creative App. It allows you to operate key camera functions without having to take your hand off the grip, which streamlines your workflow while taking photos and videos. The remote is angled at 10°, so it naturally fits the position of your index finger. Among other things, this design makes it easier to control autofocus and provides quick access to the most important functions without changing how you hold the kit.

Cage or Full Rig

The quick-mount system allows for seamless switching between different rig configurations. Simply snap the mount into place to securely attach it to the cage and create a more elaborate rig for recording. When the additional mount isn't needed, you can slide the release mechanism upward and quickly detach it, leaving just the phone cage. This allows you to adapt the PGY ProShot to both more complex video projects and situations where a lighter and simpler setup is preferred.
