It can be tough to manage multiple and dispersed UPS units without a monitoring system, along with budget and personnel constraints. This could lead potentially to inefficiencies and power outages at edge IT sites. Become an uptime champion and get peace of mind, by moving towards more predictive maintenance supported by advanced digital monitoring capabilities. Get a quick and efficient response from your trusted services provider.

Subscribe EcoCare today!

EcoCare membership is a next-generation service plan.
It starts by extracting data from the UPS covering critical parameters like battery health and temperature. Our EcoStruxureTM IoT platform translates the data into high-value insights, enabling our remote services team to perform 24/7 proactive monitoring and alarming, supported by the on-site services team if required. We help our EcoCare members:
- Save up to 40% on costs related to staff, transportation, and parts*
- Benefit from priority access to our services experts, including remote troubleshooting, to help reduce mean-time-to-repair (MTTR)
