Product Code: 1416342

R1,854

Essential tool kit to service and repair laptops, smartphones, and tablets.

This compact toolkit equips technicians with high-quality tools needed for servicing laptops, desktops, tablets, and mobile devices safely and efficiently.

Precision Bits

The set includes 30 S2 steel magnetic bits, Phillips, Torx, Pentalobe, Hex, Slotted, Tri-wing, Triangle, and SIM ejector styles. These bits offer quick access and compatibility across a broad range of devices, from Ultrabooks to smartphones.

Safe Opening Tools

This toolkit features a selection of essential pry tools, including triangle paddles, spudgers, and an ergonomic metal pry tool engineered for precision electronic repairs. These tools are designed to safely separate enclosures, offering a balance of durability, flexibility, and non-abrasiveness. Nylon tools reduce the risk of static discharge when working on sensitive electronics.

Tools for Precision Work

Kit includes an anodized aluminum screwdriver handle with magnetic tip and features a spinning cap for better torque control and comfort, as well as angled tweezers for tight spaces that provide a secure grip on tiny screws, connectors, or ribbon cables.

Innovative Case Lid for Part Organization

To streamline repairs, the detachable case lid doubles as a portable sorting tray and includes a magnetic pad to securely hold screws and small components, keeping the workspace organized and efficient.
