Secure your laptop, docking station, or other peripherals with this Noble-slot compatible lock

The Noble Wedge® Laptop Lock is designed to deter theft of laptops and ultra-slim notebook computers. The security lock features a 5ft (1.5m) cut-resistant steel cable, making it a durable and reliable solution for securing laptops and other devices with a Noble Wedge® security slot.

Lock Design

The off-center lock tip is specifically designed to allow most Ultrabook or thin laptop to remain flat when the lock is attached. The lock head, with a diameter of 0.62" (15.7mm) and capable of 180° rotation, provides flexibility that reduces coiling and alleviates strain on the notebook slot.

A pre-installed protective foam spacer near the tip of the lock prevents scuffing of the laptop or peripheral device.

Keyed Anti-Theft Laptop Lock

The laptop lock includes two zinc alloy keys that allows immediate access, eliminating the need to remember a combination. The lock can withstand up to 69lb (31kg) of pulling force, providing a layer of physical security for the computer or other desktop peripherals.

Note: Pull force ratings may vary if security slots do not meet the design standards specified by their respective manufacturers.

Broad Compatibility

The versatile security lock is not limited to laptops or notebooks. It can be used to secure other devices such as docking stations, monitors, printers, SFF computers, projectors, oscilloscopes or other office and lab equipment expanding its utility.

Combine the safely cable with anchor locks LTANCHOR & LTANCHORL (sold separately) to secure equipment to almost any flat surface.
