R984

Anti-theft laptop security lock to protect your device when traveling and in low-supervision areas This Manhattan Laptop Nano Lock is your reliable security companion in today’s world of mobile workforces and BYOD trends. It protects your expensive mobile devices and the sensitive information they contain, wherever your workday takes you. It's easy to use and carry so your laptop stays right where it needs to be.

Reliable protection for ultra-thin laptops and tablets

This lock effortlessly latches directly into the most common industry nano-sized lock slot design, the Kensington Nano Security Slot, which is used in many ultra-thin notebook computers and some tablets. Its very slim lock head won’t raise your device off its surface, allowing it to lie flat and stable

Two included keys - no need to remember combinations

The key mechanism allows for quick locking and unlocking without the need to remember sequential numbers. Additionally, it is equipped with a protective spacer near the lock tip to prevent scuffing or denting of the laptop's lock slot.

Strong, durable and cut-resistant steel cable

Set in 1.8 meters (6 ft.) of sleeved, galvanized steel, this cable lock strongly resists cutting attempts. The flexible construction bends easily to loop around a stationary post, desk, table or other attachment point. A durable PVC jacket helps protect electronics, furniture and other objects from scratches and damage.

Security first in retail, educational environments and trade show booths

Most electronics theft is a crime of opportunity, and it only takes a second to steal an untethered laptop from a desk or table. Better safe than sorry in places like libraries, computer labs, government offices, universities, airports and many other public spaces.
