The wheel plate and shifter paddles are manufactured using forged carbon fiber more commonly found on hypercars.

The RS V2 features programmable mechanical buttons with a positive tactile feel. The buttons are backlit and customisable with 8 different colours. With two universal joysticks and 20 segment dials, the RS V2 offers the racer full control during a race.

Customized Quick Release

MOZA's customized industry leading quick-release system is derived from the real racing world and allows racers to switch quickly between wheels whilst ensuring a solid and stable connection.

RGB Sequential RPM/Shift Light Indicator

Using the latest technology the Moza RS v2 features an RPM/shift indicator made of sequential flow lighting. The 10 RGB lights are fully customisable with 7 different colours.

Supports Wireless & Wired Communication

Compatible with all MOZA bases. It works on the R21/R16/R9 bases with wireless communication technology and can also work on the R5 base through slip-ring wired communication.

Dual Clutch System with Magnetic Shifters

The RS V2 features magnetic shift paddles. The two-clutch paddles are easily toggled between single or dual-clutch mode, typically used in professional sim racing titles such as iRacing and F1 series.

Ergonomic Design

With the ergonomic design concept, measurements and manufacturing standards derived from actual race car design, the layout of the RS V2 ensures the driver has quick access to all adjustments.
