Turn one USB-C port into a compact expansion hub with four USB-C connections for 10Gbps peripherals and up to 100W Power Delivery pass-through, all in one durable, travel-ready design.

Build a Clean, High-Performance USB-C Workspace Anywhere

Create a simple, standardized setup from a single USB-C port. Add four USB-C connections for fast peripherals, including one shared-function port that supports up to 100W Power Delivery pass-through (based on host and charger capability). Plug in external SSDs, capture devices, adapters, and other USB-C peripherals simultaneously without sacrificing charging and constantly swapping cables.

Charge and Connect Without Compromise

Keep your host powered while staying productive. Use the shared-function USB-C port for up to 100W PD pass-through when you need charging, while the remaining ports maintain full 10Gbps performance for connected devices. Standardize hot desks, shared workstations, and mobile kits to reduce "not enough ports" tickets across mixed-device environments.

Expand with High-Speed, Driverless Connectivity

Add three dedicated 10Gbps USB-C data ports for file transfers, diagnostics, backups, and software loads. Deploy instantly with plug-and-play operation and no drivers required.

Built for Sustainability, Designed for Performance

The built-in 8in (20cm) host cable is a dual-layer cable that pairs a flexible silicone inner layer with a braided nylon exterior for extra abrasion resistance. This hub features a housing made from 90% post-consumer recycled (PCR) aluminum, 75% PCR Plastic, and a cable jacket composed of 35% PCR TPE (Thermoplastic Elastomer). The product also ships in FSC Mix packaging made from responsibly sourced materials. These materials help align your IT infrastructure with your organization's sustainability goals, without compromising on quality or durability.
