The Manhattan Smart Video Power Delivery Charging Hub — a workstation dock for your phone or notebook that doesn't need an external power supply
The compact Manhattan Smart Video Power Delivery Charging Hub offers three vital functions that smartphone power users and business travelers do not want to miss: display connectivity, peripheral hookups and power for your devices.

Take it to the big screen

Connect your HDMI display to your notebook or to any Android 9 and later smartphone that supports video output over USB-C and enjoy your apps and media even more. Watch a video on your TV or flip through the slides of your presentation – all from your phone.

Add connectivity options

Be more versatile and productive on the road with two SuperSpeed (USB 3.2 Gen 1, formerly USB 3.0) USB-A ports. Type emails on your phone or notebook with a full-size USB keyboard or drag and drop files from a USB drive to your device with a USB mouse.

Power up

With a 45 W USB-C Power Delivery Port, another USB-C charging port with 5 W (5 V / 1 A) and two USB-A ports with 5 V / 1 A each, you have plenty of power to charge both your notebook and smartphone while still using all workstation functions. This Manhattan PD Charging Hub also smartly protects itself and your devices from short-circuits, over-voltage, over-current and overheating.

Integrated power supply for traveling light

To power your notebook through a regular docking station, you always need a separate power supply for that dock, which adds weight and takes up space in your bag. The extra-compact Manhattan Charging Hub comes with an integrated power supply and detachable C7 power cable. When you need to be on the move, you can stow the separate pieces in the tighter spaces of your luggage for more space to bring along other important travel items, including other regional C7 power cables (such as C7 to US, EU, UK or another region).
