

GOOLOO GT6000 99.9Wh Jump Starter

Model: GT6000

Manufacturer: GOOLOO

EAN: 6979127740011

Product Code: 1545485

R3,698

GT6000 Jump Starter

The GOOLOO GT6000 is a powerful jump starter with a peak current of up to 6,000 A and a capacity of 27,000 mAh, combining the functions of a jump starter and a power bank with fast charging up to 100 W. It supports all gasoline and diesel engines up to 12.0 L and allows for over 70 starts on a single charge. Thanks to fast recharging—a full charge takes about 1.4 hours—and the ability to be ready to start in just a few minutes, the device works well in both emergencies and everyday use.

Starting power tailored to various vehicles

High peak current translates directly into effective performance—even with a completely dead battery. As a result, the device provides real help in situations where standard jump starters may not be enough. Support for 12 V systems and broad compatibility with gasoline and diesel engines make the GT6000 suitable for both passenger cars and larger vehicles. The ability to use it multiple times on a single charge means the device is useful not only in emergencies but also, for example, in

workshop settings or when working on multiple vehicles.

Fast charging and power bank function

A large 27,000 mAh capacity combined with up to 100 W charging power allows you to use the device as a universal power source. You can charge smartphones, tablets, and even laptops without needing additional chargers. Fast charging of the device itself reduces downtime—a full battery is available in a short time, and just 7 minutes of charging is enough to prepare the device for an emergency car start. This solution is particularly useful in situations where time is of the essence.

Constant readiness and reliability

Long standby time—up to 24 months—means the device can be stored in the car without needing frequent recharging. This is important for emergency equipment that isn't used every day. Thanks to this, the GT6000 remains ready for action exactly when you need it, without the risk of the battery being dead at a critical moment.

Safety and Usage Control

The “Supersafe” 10-point protection system safeguards against the most common issues, such as short circuits, overcharging, or reverse polarity. In practice, this means greater ease of use and a lower risk of damaging the vehicle's electrical system or the device itself. A large, 3.2-inch LED display provides a clear overview of the most important parameters—charge level, power, and operating status—making it easy to monitor the device in any situation, even in low light.

Additional features useful on the road

The built-in 400-lumen LED flashlight expands the device's functionality beyond just jump-starting. The continuous mode makes working after dark easier, while the strobe and SOS signal can help in emergency situations on the road. Thanks to this, the GT6000 serves not only as a technical device but also as practical support while traveling.

A complete, ready-to-use kit

The kit includes all the necessary accessories, allowing you to use the device immediately after purchase. Sturdy cables with clamps ensure a secure connection during jump-starting, while the 100 W car charger and USB cables allow for convenient recharging in various conditions. An additional cigarette lighter adapter and a practical carrying case enhance convenience and storage, keeping the entire kit organized and always within reach.

Included

- GOOLOO GT6000 Jump Starter
- Durable cables with clamps
- 100 W car charger
- Two USB cables (USB-C to USB-C and USB-A to USB-C)
- Cigarette lighter adapter
- User manual
- Carrying bag/case

Manufacturer	GOOLOO
Model	GT6000
Peak current	6000 A
Voltage	12 V
Compatibility	Gasoline and diesel engines up to 12.0 L
Capacity	27,000 mAh (99.9 Wh)
Display	LED, 3.2 inches
Flashlight	400-lumen LED

Lighting modes Steady, strobe, SOS
