InLine 16633A power cable

Model: 16633A

Manufacturer: INLINE

EAN: 4043718352494

Product Code: 1552526

R915

Y-splitter cable with angled IEC-C14 plug for space-saving power distribution

Space-saving installation: The angled IEC-C14 plug allows for neat cable routing in tight installation spaces and makes it easier to connect power behind equipment.
Two devices on a single connection: The power Y-cable splits the power supply from 1x IEC-C14 to 2x IEC-C13, thereby reducing the amount of cabling required.
Efficient cable management: The Y-design helps to organise power connections clearly and reduce the number of separate cables.
Flexible length options: With lengths of 1 m and 1.8 m, the right cable length is available for different installation distances.

The InLine® power Y-cable with an angled IEC-C14 plug to 2x IEC-C13 is a practical solution for power distribution in compact installation environments. It enables two devices to be powered via a single IEC C14 socket, thereby reducing the effort required for cabling. Thanks to the angled design

of the IEC C14 plug, the cable is particularly well suited for use in areas with limited space behind equipment. This promotes tidy cable management and can simplify installation. The Y-cable is suitable for applications with a shared power supply. The 1 m and 1.8 m lengths offer flexibility.

Connector: 1x IEC-C14 to 2x IEC-C13

Lengths: 1 m, 1.8 m

Colour: Black

Applications: Server rooms, data centres, IT workstations, industrial facilities, home offices
