VEXILAR C9 Upright Vacuum Cleaner

The VEXILAR C9 upright vacuum cleaner is a corded model offering suction power of up to 70 kPa, two operating modes (ECO and MAX), and a 6-stage filtration system with a HEPA filter. The 6.5-meter-long cord provides a wide cleaning range, and the AC power supply allows you to use the device’s full functionality without interruptions to recharge the battery. The model is also equipped with a 1-liter dust container, a telescoping tube, a motorized floor brush with four green LEDs, and additional attachments that allow you to vacuum floors, carpets, furniture, and hard-to-reach areas.

Suction power up to 70 kPa and two operating modes

Suction power of up to 70 kPa allows you to efficiently pick up dust, crumbs, hair, and other everyday debris from various surfaces. The VEXILAR C9 offers two operating modes—ECO and MAX—so you can adjust your cleaning method to the type of dirt and the surface being cleaned. The vacuum cleaner is powered directly from the outlet, so there’s no need to monitor the battery level

or take breaks to recharge it.

6-stage filtration system

The VEXILAR C9 uses a sophisticated, 6-stage filtration system that gradually separates contaminants from the airflow. It consists of a cyclone separator, a stainless steel mesh filter, a conical filter, a foam filter, a HEPA filter, and an exhaust filter. Each layer traps contaminants of varying sizes, from larger particles and hair to fine dust, which supports the effective operation of the entire filtration system.

LED lighting helps you spot dust

The motorized floor brush is equipped with four green LEDs that illuminate the area directly in front of the vacuum cleaner. This feature makes it easier to spot fine dust and dirt, especially on the floor under furniture and in dimly lit areas. As a result, it’s easier to monitor the surface being cleaned and vacuum more thoroughly in places where dirt might otherwise go unnoticed.

From the floor to hard-to-reach nooks and crannies

The VEXILAR C9’s design allows you to use the device to clean various surfaces and areas throughout your home. The telescoping tube extends the reach when vacuuming high places, while the main unit can be used as a compact vacuum cleaner for furniture and other surfaces when the tube is detached. The set also includes a crevice tool and a 2-in-1 attachment, which make it easy to remove dirt from between furniture, along baseboards, in corners, and from upholstery.

1-liter dust container and convenient storage

The dust container has a 1-liter capacity and does not require disposable bags, which simplifies daily use of the appliance. The emptying system allows you to quickly remove accumulated debris, and the dual cord hook helps keep the cord tidy after cleaning. The vacuum cleaner can stand upright, and the included wall mount provides an additional storage option when the unit is not in use.

Included in the set
