

InLine 31651 cable gender changer USB-C USB-A Red

Model: 31651

Manufacturer: INLINE

EAN: 4043718346578

Product Code: 1558836

R844

Effective data protection during charging:The data lines are physically separated – data transfer via USB-C is impossible.

USB-C to USB-A adapter function:Enables safe charging of modern devices via classic USB-A charging ports.

For existing charging environments:Ideal for power supplies, USB hubs, or vehicle adapters with USB-A ports.

Universally applicable:Compatible with all USB-C devices, regardless of operating system or manufacturer.

Compact design:Lightweight, handy, and ideal for mobile use in security-critical areas.

The InLine® USB data blocker with USB-C plug to USB-A socket offers a simple way to safely charge modern USB-C devices via classic USB-A charging ports – without the risk of data transfer. The data lines are physically separated, allowing only charging. This ensures that sensitive information cannot be unintentionally transferred to PCs, laptops, or USB hubs.

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

This data blocker is a useful everyday tool, especially in environments with older charging infrastructure, such as office power supplies, public USB-A ports, or vehicle adapters. Thanks to its compact design, the adapter is easy to transport and can be quickly used whenever secure charging is required.

The device is universally applicable and compatible with all USB-C devices – regardless of manufacturer or operating system. The charging power is 5 V at up to 1.5 A.

Connection 1: USB-C plug

Connection 2: USB-A socket

Data connection: not connected (charging only possible)

Power: 5 V / 1.5 A

Area of application: data security, mobile USB-C devices on USB-A ports
