R856

Reliably prevents data transfer:The data lines are physically separated – only secure charging via USB-A is possible.

USB-A to USB-C connection:Enables the secure use of modern USB-C devices on classic USB-A charging ports.

Ideal for older chargers:Can be used with power supplies, USB hubs, or car adapters with USB-A output.

Compact and mobile:The adapter fits in any bag and is ready for immediate use – on the go or in the office.

Universally compatible:Works with all common USB-C devices, regardless of the operating system.

The InLine® USB data blocker with USB-A plug to USB-C socket protects modern USB-C devices from unwanted data access when charging via classic USB-A ports. The data lines are physically

separated – no data transfer takes place. This makes the adapter ideal for use with chargers, USB

hubs, or vehicle adapters with USB-A output, where secure charging without a data connection is required.

With its compact design, the adapter is easy to transport and can be used anywhere where mobile devices need to be charged via USB-A. It offers added security, especially in work environments, public institutions, or when traveling.

The adapter is compatible with all common USB-C devices—such as smartphones, tablets, or accessories—regardless of manufacturer or platform. The charging power is 5 V at 1.5 A, which is sufficient for many mobile applications.

Connection 1: USB-A plug

Connection 2: USB-C socket

Data connection: not connected (charging only possible)

Power: 5 V / 1.5 A

Area of application: Safe charging of USB-C devices via USB-A ports
