InLine 26899B power plug adapter Black

Model: 26899B

Manufacturer: INLINE

EAN: 4043718350018

Product Code: 1558882

R798

Angled DC adapter for space-saving cable routing

Space-saving cable routing: The angled design directs the connected DC cable to the side, reducing the space required in front of the device connection.

Precision-fit DC connection: The adapter connects a 4.0 x 1.7 mm DC male connector to a DC female socket of the same size.

Flexibly supplement an existing connection: The connection direction can be adjusted without replacing the existing cable or power supply.

Suitable for compact installations: The 90° adapter facilitates tidy cable routing behind devices, along enclosures or in space-constrained set-ups.

The angled DC adapter enables customised cable routing for existing power connections. It is suitable for situations where a straight plug protrudes too far from the socket or where the cable needs to be routed to the side immediately adjacent to the device.

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

The adapter is plugged between a compatible DC power supply and the device socket. It only alters the mechanical orientation of the connection. Voltage and current are not converted. This makes it easy to adapt an existing installation to the available space.
The compact design facilitates use behind devices, inside enclosures or close to walls and rear panels. At the same time, it prevents the connected cable from being sharply bent directly behind the plug.

Connector 1: DC male plug
Connector 2: DC female socket
Operating voltage: 12 V
Maximum operating current: 2 A
Maximum power: 24 W
Housing material: PVC
Metal sleeves: Nickel-plated
