

# Master Grip Mount for iPhone 17 Pro Max All-in-One Kit with Light and UV Filter

Model: P5-MCS-25-TIP

Manufacturer: TELESIN

EAN: 6974944467004

Product Code: 1563837

## R2,996

### Master Grip Mount for iPhone 17 Pro Max - All-in-One Kit with Light and UV Filter

The Master Grip Mount for iPhone 17 Pro Max is a comprehensive tool for mobile creators that combines an ergonomic grip, a 32N MagSafe magnetic mount, a built-in 3200 mAh battery, and support for the Reef Color App. The kit includes a fill light and a UV filter, allowing you to immediately improve your shooting conditions without purchasing additional accessories. The construction is made of CNC-machined aluminum, which enhances durability and provides a more “professional” feel during use. It’s worth noting that the listed weight of 727 g applies to the entire kit (mount + phone), which translates to greater stability but also a noticeable heft in your hand.

The product information provided is for reference purposes only. Technical specifications, photos, descriptions and prices may change without prior notice. The manufacturer and seller are not responsible for possible data discrepancies or typographical errors. We recommend checking the current information before purchasing.

## **Stable grip and thoughtful ergonomics**

The ergonomic shape of the mount improves grip and allows for steadier shots without the need for a gimbal. Its larger dimensions—approximately 11.7 × 8.1 × 22.6 cm—make the whole unit fit better in the hand and provide greater control over the frame. The thumb rest is designed to minimize accidental screen touches while recording. In practice, this means a lower risk of unintentionally exiting the camera app while shooting.

## **Strong 32N MagSafe Mount**

The mount uses a strong 32N magnetic attachment, which corresponds to a holding capacity of approximately 3.2 kg. Thanks to this, the iPhone stays stable even while moving or recording with one hand. This solution increases the safety of the smartphone and provides greater peace of mind during dynamic shots. At the same time, the convenience of quickly attaching and detaching the phone is maintained.

## **Power Supply and Power Bank Function**

The built-in 3200 mAh battery extends the iPhone's runtime without interrupting recording. The mount functions as a power bank with magnetic charging, so the phone can be recharged while in use. This is particularly useful for 4K recordings, which drain the battery quickly. The manufacturer claims the ability to extend recording time by up to about an hour, which significantly improves the comfort of working in the field.

## **Passive graphene cooling**

The 7,600 mm<sup>2</sup> graphene surface helps dissipate heat from the device. The design with ventilation holes improves airflow, which helps maintain stable phone performance. The manufacturer claims a roughly 25% increase in cooling efficiency, though this should be considered an approximate figure. The cooling system is passive—meaning it doesn't use a fan—so it operates silently and doesn't increase energy consumption.

## **Camera-style controls**

The grip features a two-stage shutter button that works similarly to those on classic cameras. A light press allows you to focus and lock the exposure, while a full press takes a photo or starts recording. This solution gives you greater control over the shot and makes it easier to work in challenging lighting conditions. This allows you to react faster without having to use the screen.

## **Precise zoom control**

The built-in dial and zoom slider allow for smooth framing adjustments without touching the screen. In photo mode, you can adjust the zoom with precision in 0.1x increments, allowing you to fine-tune the frame. In video mode, using the app, you can achieve a smooth, cinematic zoom in the 1-3x range. This is particularly useful for recordings where natural movement is key.

## **The Reef Color App and its capabilities**

The full functionality of the mount is unlocked when paired with the Reef Color App. It provides access to filters, settings, and extended control via buttons and a dial. Without the app, basic functions work, but customization options are limited. This allows the user to decide whether to use simple controls or more advanced options.

## **UV filter and lamp - practical accessories**

The included UV filter primarily serves a protective function for the lens and can reduce the impact of ultraviolet radiation. It does not replace a polarizing filter, so it does not eliminate reflections, but it helps protect the equipment during daily use. The lamp, on the other hand, effectively improves scene illumination, which translates to better recording quality in low light. The CNC-machined aluminum housing enhances the durability and stability of the entire structure. This material is more wear-resistant than typical plastics, which is important for frequent use. An additional non-slip texture improves grip and comfort. The whole unit feels more like photography equipment than a classic phone accessory.

## **Included**

- TELESIN Master Grip
- Case compatible with the grip
